

Accounts — Recording Script

Audience: accounts team (watch [getting-started.md](#) first).

Target length: ~15 minutes (splits naturally after Scene 8, before Collections, if that's more than you want in one take)

Before you record: have one invoice with a "Pending Invoice #" badge, one already-numbered invoice, one recurring invoice template, one invoice with a broken payment promise, one recurring template that's Not Billed (paused before its first cycle, if you have one), and one milestone marked Done-but-not-invoiced ready to click through. Log in as an accounts user.

Scene 1 — Intro + dashboard (0:00–0:45)

ON SCREEN: Accounts dashboard, click through to "View payments collected" and "View overdue invoices".

SAY: "This one's for accounts. You own invoices, payments, recurring billing, and the revenue and cash reports. Your dashboard shows outstanding receivables, what's been collected this month, and how many invoices are overdue — and the last two numbers aren't just static tiles: click 'View payments collected' for the individual payments behind that figure — date, client, invoice, mode, who recorded it — and click 'View overdue invoices' for exactly which ones are overdue, instead of just a count."

Scene 2 — GST-compliant invoices (0:45–1:45)

ON SCREEN: Open an invoice, point at the GSTIN, tax breakup, and amount-in-words sections.

SAY: "Every invoice here is GST-compliant. Maharashtra clients get CGST plus SGST; other Indian states get IGST at the full rate; overseas clients are zero-rated automatically — no GST, and the PDF says 'Export of Services' instead — that's driven entirely by the Country field on the client, nothing to set manually. There's also a Non-GST client checkbox on a client's profile, for a domestic client who's arranged to be billed without GST — different from Country, they're still in India, we're just not charging them GST. Each invoice number looks like NEDS/2026-27/0042, shows both parties' GSTINs, HSN codes, the tax breakup, and the amount in words."

Scene 3 — Assigning the invoice number (1:45–2:45)

ON SCREEN: Open the invoice with the pending badge, click Assign

Invoice Number.

SAY: "When sales converts a quotation to an invoice, it lands here with a yellow 'Pending Invoice #' badge — no GST number yet. Open it and click Assign Invoice Number to generate the next sequential number. You can't send or download the PDF until you do this — it's the gate that keeps numbering sequential and correct. And if an invoice was created by mistake, Admin, Manager, or Accounts can delete it — even one with a payment recorded, which removes the payment too, so use that deliberately. For a GST mistake on an invoice that's already been paid, a credit note is usually the right tool instead of deleting."

Scene 4 — Recording a payment, with TDS, and correcting one later (2:45–5:00)

ON SCREEN: Open an invoice → Record a payment → fill amount/date/mode → enter a TDS amount → point at the TDS tile → tick the receipt checkbox → Record. Then click Edit next to a recorded payment and change the date.

SAY: "To record a payment, open the invoice, fill in amount, date, and mode — UPI, NEFT, cheque, cash, or gateway. Partial payments are fine — the invoice moves to Partially Paid, then Paid once it's fully settled, automatically. If the client deducted TDS before paying, enter that in the TDS Amount field alongside the payment — the invoice counts as fully settled once amount paid plus TDS deducted reaches the total, even though the actual cash you received is less. You'll see a TDS tile next to Total/Paid/Balance, and the PDF adds a 'TDS deducted' line automatically once any TDS has been recorded. If the client has an email on file, you'll see a 'Send payment receipt to client' checkbox — tick it before you click Record and they get an emailed confirmation with the amount, mode, and remaining balance. Once you save, a bell notification goes out to the rest of accounts and the client's sales rep — purely informational, nothing for you to do there. And if you made a typo on the date, mode, or reference number after saving — click Edit right next to that payment on the invoice page and fix it inline, no need to delete and re-record. The amount and TDS aren't editable there, though — get those wrong and you still have to delete the payment and record it again, since those two actually drive the invoice's balance."

Scene 5 — Payment promise tracking (5:00–6:00)

ON SCREEN: Open an unpaid overdue invoice → set "Client promised to pay by" → point at a different invoice already showing the red "Payment promise broken" badge.

SAY: "When a client says 'I'll pay in a day or two' past the due date, don't just remember it — open the invoice and set 'Client promised to pay

by' to that date. If it passes and the invoice is still unpaid, it gets flagged Payment promise broken, right here and on the Collections report. You don't have to go check for it either — the morning after a promised date breaks, you and admin/managers get a bell notification automatically. It fires once per promise, and again if a new promise is made and also breaks. Use the notes box on the same page to log what was actually said each time you follow up."

Scene 6 — Milestone billing (6:00–7:00)

ON SCREEN: Open a quotation's Milestone Manager, point at a milestone marked Done with a green "Ready to invoice" badge, and — if any task is linked to it — the "Mark this milestone Done?" suggestion banner.

SAY: "For milestone/project work, each milestone on the quotation has its own status — Pending, In Progress, Done — separate from whether it's been invoiced. Whoever's running the project marks it Done once that phase is actually finished. Once it's Done and not yet invoiced, you'll see a green 'Ready to invoice' badge here and on the Collections report — that's your cue to raise the next invoice. If the project's tasks are tagged to this milestone, you might also see a one-click 'mark this Done?' banner once every linked task is finished — still just a suggestion, someone has to click it, nothing flips automatically."

Scene 7 — Recurring invoices, including "Not Billed" (7:00–9:00)

ON SCREEN: Invoices → Recurring Invoices → open a template → show its generated-invoice history → Send Email on one row → point at an "Ended" template, an "On Hold" one, and — on the client's own Services tab — one showing "Not Billed".

SAY: "For monthly retainers — SEO, GMB, social, ads, AMC — set up a recurring template here. Every morning the scheduler checks for due templates and auto-generates and emails the invoice — you don't have to do anything. Click into a template to see its full history of generated invoices; from there you can resend an invoice by email, or click View/Pay to record a payment on any of them, same as a normal invoice. On this page, Ended means the template had an end date that's passed and it won't bill again — On Hold means someone paused it, or it has no end date and just isn't active, worth checking if it should be resumed. On the client's own Services tab specifically, a finished period can also show as 'Not Billed' instead of 'Ended' — that's a template whose period ended without ever generating an invoice at all, like one paused before its first billing cycle. It's a real, intentional status, not a bug — just means nothing was ever billed for that stretch. Clients also get automatic reminder emails 7,

5, 3, and 1 day before each billing date, and 30 days before an active contract's end date you and admin/managers get a renewal reminder — all hands-off. And every morning at 8 AM, if any recurring invoice is due in exactly 7 days and unpaid, you get a bell notification too."

Scene 8 — Deleting a recurring template (9:00–9:30)

ON SCREEN: Point at the Delete button on a template.

SAY: "If a retainer ends, open the template and delete it — that removes the template and its future schedule, but every invoice it already generated stays untouched for your records. Pause is different from Delete — Pause just stops future billing but keeps the template around as On Hold, so if you're cleaning up a duplicate or test template, make sure you actually click Delete."

Scene 9 — Collections worklist (9:30–10:45)

ON SCREEN: Sidebar → Collections → point at the client picker (All / Direct / one partner) and a row showing recurring-not-paid, partial, and promise-broken status.

SAY: "Collections, in the sidebar, is your client-by-client follow-up worklist — this is the page to work down each morning if you're chasing payments. For every client with something outstanding, it shows what's recurring and unpaid, what's partially paid, any broken payment promise, how many days overdue, and for milestone-billed projects, the completion percent and whether the next milestone is ready to invoice. Use the picker at the top to see all clients, only direct clients, or just one partner's."

Scene 10 — Cash Forecast (10:45–11:45)

ON SCREEN: Dashboard → Reports → Cash Forecast.

SAY: "Cash Forecast is your near-term cash view, bucketed by the next three months — recurring revenue expected from active templates, plus receivables already invoiced and due, with anything already overdue collapsed into the current month since it's owed right now regardless of its original date. The open pipeline's weighted forecast is shown separately and clearly marked indicative — it's not blended in as if it were committed cash, since deals don't have an expected-close date to bucket by."

Scene 11 — Reports (11:45–13:15)

ON SCREEN: Sidebar Account → outstanding receivables, then Dashboard → Reports → Revenue Report, then Business Overview.

SAY: "For the rest of reporting: the sidebar's Account report shows outstanding receivables — who owes what and how overdue — and this is the same underlying figure as the dashboard's outstanding-receivables tile, so the two can never disagree. From the dashboard's Reports panel, the Revenue Report breaks income down by month, by service, and by client, split recurring versus one-time — export either to CSV. Business Overview is the executive snapshot — as Accounts you see the full detail, same as Admin: AR aging broken into current/0-30/31-60/61-90/90-plus day buckets with the itemized overdue invoice list, the full MRR breakdown by service and which contracts expire in the next 30 days, and the named top client breakdown behind the concentration percentages."

Scene 12 — Your Productivity, Reminders, and wrap-up (13:15–15:00)

ON SCREEN: Point at the "Your Productivity This Month" widget, then the Reminders card.

SAY: "Two more things on your dashboard. 'Your Productivity This Month' shows your rank among other Accounts staff — private, nobody else sees your rank and you don't see theirs — plus your single biggest opportunity area. If AI's enabled, click 'Get tips to improve' for a specific suggestion based on your own numbers. And the Reminders card shows any nudges targeted at Accounts, or everyone — click Done once you've handled one, or Snooze to hide it from your own view for a few days without making it disappear for your manager. Two habits that matter most: assign the invoice number before trying to send anything — the button's disabled until you do — and record payments promptly so the dashboard numbers stay accurate. Also worth knowing, none of the daily digest or reminder emails go out on Sundays."
