

Sales — Recording Script

Audience: sales team (watch [getting-started.md](#) first).

Target length: ~15 minutes (splits naturally after Scene 9 if that feels like too much for one take — Scenes 1–9 cover lead-to-deal, 10–15 cover quotation-to-invoice-and-beyond)

Before you record: have one existing lead, one existing client with an open deal (ideally with a "Deals like this one" match — another closed deal on the same service), one existing quotation linked to a deal with notes, and — if you've connected a Google account — a recent Google Meet call with a client ready to import. Log in as a sales user.

Scene 1 — Intro + dashboard (0:00–0:40)

ON SCREEN: Sales dashboard.

SAY: "This one's for sales. Your workflow runs lead, to deal, to quotation, to invoice — let's walk through each step. Your dashboard shows follow-ups due today, what you've won this month, your open pipeline by stage, and that same overdue-tasks banner if you have one."

Scene 2 — Adding a lead (0:40–2:00)

ON SCREEN: Lead Generation → Add Lead → fill the form → Save.

SAY: "To add a lead: Lead Generation, Add Lead. Fill in name, company, phone or email, where they came from, which service they're interested in, and an estimated value — assign yourself as owner. Save it, and within a minute a score badge appears — 0 to 100, higher means more promising. Hover over it to see why. If you edit the lead later, it re-scores automatically. One thing to know: leads that existed before AI was turned on won't show a badge until you open them and save an edit."

Scene 3 — Working a lead (2:00–3:45)

ON SCREEN: Open the lead, add a note, click Dictate on the Notes field and speak a line, then Log a call, then expand "Add follow-up reminder."

SAY: "Once you're working a lead, add notes as you go — everything shows up on the timeline. On the Notes field, you can click Dictate and just speak instead of typing — your browser transcribes it live, and you can still edit before saving. That's Chrome or Edge only; the button simply won't show up elsewhere. After you call them, log the call and record the outcome. If you need a follow-up, click 'Add follow-up

reminder' — the date field starts blank on purpose, so set it to the actual day you want to be reminded, not just tomorrow by default. Add a one-line next action. You'll get a bell notification when that time hits, and it'll show in your morning digest. There's also a Draft follow-up button — that's Claude writing a suggested message for you to edit and send yourself. It never sends anything on its own."

Scene 4 — Google Meet Notes (3:45–4:25)

ON SCREEN: Open a client's Calls tab → click + Import Meet Notes → point at the recording link, transcript link, and — if AI is enabled — an AI-summarized "Key points / Decisions / Action items" section.

SAY: "If you're on Google Meet calls with clients, connect your Google account once from Profile — then on a client or lead's Calls tab, click '+ Import Meet Notes' to pull in your recent Meet calls with them. It saves the recording link, transcript link, and the full transcript text right there, same as a logged call. It's read-only — nothing in your Calendar or Drive ever changes — and it only picks up meetings you personally organized and recorded, a few minutes after the call ends for Google to finish processing. If AI is enabled, an imported meeting with a transcript also gets a short AI summary — key points, decisions, action items — so you don't have to re-read the whole transcript later."

Scene 5 — Converting a lead (4:25–5:10)

ON SCREEN: Click Convert on a lead.

SAY: "When it's real business, click Convert. That creates a Client and a Deal automatically, linked together. The new client shows up as 'Prospect' in yellow — it flips to Active in green automatically the moment you mark the deal Won."

Scene 6 — Send Quotation shortcut (5:10–5:40)

ON SCREEN: Open a lead, click Send Quotation.

SAY: "You don't actually have to convert first — open any lead and click Send Quotation. If they're not converted yet, the CRM does that for you automatically and drops you straight into the quotation builder, already filled in."

Scene 7 — Pipeline board (5:40–6:40)

ON SCREEN: Sales Department board, drag a deal between columns, point at a stale-deal badge.

SAY: "Your pipeline board — New, Contacted, Proposal, Negotiation, Won

or Lost. Drag a deal to the next stage as it progresses, or open it and change the stage directly. Won and Lost are final on the stage — though the Value stays correctable afterwards if the final number changes, and every report picks that up automatically. Each card shows how many days it's been sitting in its current stage, turning red past 10 — that's a nudge to follow up, not a penalty. If a deal came through a partner agency rather than directly, set the 'Referred by' dropdown on the deal — leave it as Direct otherwise."

Scene 8 — Pipeline KPIs and the Sales Dashboard (6:40–8:10)

ON SCREEN: Point at the KPI strip above the board (open pipeline, weighted forecast, won this month/FY, win rate, avg deal size, avg sales cycle), then Sidebar → Sales Dashboard.

SAY: "Above the board, this KPI strip is your own numbers at a glance — open pipeline, a weighted forecast that adjusts for how likely each stage actually is to close, won this month and this financial year, win rate, average deal size, average sales cycle. For the fuller picture, there's a whole Sales Dashboard page in the sidebar — same numbers, plus a 12-month won-value trend chart, a service-line breakdown so you can see what's actually converting, a Needs Attention list of deals that are stale, overdue on follow-up, or sitting at a ₹0 value, and — if your manager's set one — a target-vs-actual progress bar."

Scene 9 — Deals like this one (8:10–8:40)

ON SCREEN: Open a deal with at least one comparable closed deal, scroll to the "Deals like this one" panel.

SAY: "One more thing on a deal's page — 'Deals like this one' shows up to three other closed deals for the same service, ranked by how close their value is to this one. Useful context on how deals with this profile actually tend to go, both wins and losses. It needs a service set on the deal, and at least one other closed deal in that service to compare against."

Scene 10 — Building a quotation, with AI scope of work (8:40–10:40)

ON SCREEN: Open a deal → + New Quotation → click ✨ Suggest line items → review the suggested lines → scroll to Scope of Work → click ✨ Draft scope of work → add a milestone → save → download PDF.

SAY: "For quotations — easiest way is opening a deal and clicking '+ New Quotation' right there, client and deal already filled in. If the deal has notes on it, try ' ✨ Suggest line items' first — Claude drafts a first

pass at the description, quantity, and SAC code for each line based only on what's actually in those notes. It never fills in a rate or a GST percent — those stay blank on every suggested line, exactly like a manually-added one, so you're still the one pricing and saving it. Below the line items, there's a Scope of Work paragraph shown to the client — if the deal has notes, ' ✨ Draft scope of work' writes that paragraph for you too, grounded only in the deal's notes and service line, and it never mentions price or rate — that's what the line items are for. Either button, if the deal has no notes yet, just says so instead of guessing. GST calculates itself once you fill in a rate — CGST plus SGST for Maharashtra clients, IGST for everyone else. For project work, add milestones — advance on signing, balance on delivery, that kind of thing. Save, download the PDF, send it to the client — or click Send to Client to email it straight from here. Once they agree, mark it Accepted, then Convert to invoice — accounts takes it from there."

Scene 11 — Clients (10:40–11:40)

ON SCREEN: Clients list, then Clients → Import, then point at the Non-GST client checkbox on a client's edit page.

SAY: "Your Clients list only shows companies assigned to you plus unassigned ones — not your teammates' clients. Add one at a time with Clients, Add, or bulk-import a CSV with Clients, Import — download the template first, it's got columns for address, owner, and tags. Leave Owner blank and it assigns to you automatically. For clients outside India, set the Country field — that hides GSTIN and State and produces a zero-rated, no-GST invoice automatically. For a domestic client who's arranged to be billed with no GST, tick 'Non-GST client' instead — different from Country, they're still in India, we're just not charging GST on their bills."

Scene 12 — AI content drafts on a client (11:40–12:40)

ON SCREEN: Open a client → Notes tab → point at an "AI-drafted monthly update" note. Then open one of your projects and point at the "Pending Client Update" panel.

SAY: "Two AI drafts worth knowing about that show up on their own. On the 1st of each month, if a client had any activity the month before — tasks done, tickets resolved, a payment, project posts — Claude drafts a short 'here's what we delivered' note on their Notes tab. It's staff-only; review it, personalize it, and send it yourself if it reads right. And on any project you run, if a task was completed that day, you'll see a Pending Client Update panel most evenings — edit it if needed, then click

Approve & Send to post it straight to the client's portal and email their billing contact in one step, or Discard if it's not worth sharing. Nothing reaches the client until you click Approve & Send."

Scene 13 — Sales Incentive (12:40–13:25)

ON SCREEN: Sidebar → Incentives.

SAY: "Sidebar → Incentives shows your monthly sales incentive, live — calculated from the same 'won this month' value you already see on the Sales Dashboard, so the two pages never disagree. It's a tiered rate on your before-tax sales this month — 6% up to ₹50,000, 10% up to ₹1,00,000, 12.5% up to ₹1,50,000, 15% up to ₹2,50,000, 20% above that — and the rates are marginal, like income tax, so each slab only applies to the sales within that band. There's never a reason to hold a deal back to avoid crossing a boundary. There's also a team bonus — a fixed pool split evenly across active Sales staff — that only pays out if the company hits its monthly target. This stays live all month; on the 1st, last month's number gets locked in as a final statement."

Scene 14 — Your Productivity and Reminders (13:25–14:10)

ON SCREEN: Point at the "Your Productivity This Month" widget, then the Reminders card.

SAY: "Two more things on your dashboard. 'Your Productivity This Month' shows your rank among other Sales staff — private, nobody else sees your rank and you don't see theirs — plus your single biggest opportunity area. If AI's enabled, click 'Get tips to improve' for a specific suggestion based on your own numbers. And the Reminders card shows any nudges targeted at Sales, or everyone — click Done once you've handled one, or Snooze to hide it from your own view for a few days without making it disappear for your manager."

Scene 15 — Bell notifications + wrap-up (14:10–15:00)

ON SCREEN: Point at the bell icon.

SAY: "You'll get bell notifications for a new lead assigned to you, a nurture follow-up Claude drafted when a lead's gone quiet, a new quotation on your deal, your deal being marked Won, a new invoice for your client, your monthly wins note being drafted, and a project update ready for your review. And two daily emails: a 9 AM morning digest, and a 10 AM stagnation alert if a lead's gone 7 days or a deal 10 days without any activity — even a quick note resets that clock. Keep your notes and call outcomes up to date; they drive your follow-up list and your performance

report."
