

Telecaller guide

Welcome to the NEDS CRM. As a telecaller, your job is calling and qualifying leads — the CRM gives you access to exactly that: **Lead Generation** and **Calling**, plus the same daily basics everyone gets (attendance, tasks, daily reports).

1. Your dashboard

When you log in, you'll see:

- **New leads to call** — how many leads currently marked New are assigned to **you specifically**. Every new lead is automatically routed to a telecaller (round-robin, same idea as how a lead routes to a Sales rep) the moment it's created, and Admin/Manager can also assign or reassign one to you by hand from the lead's own page. This used to be a shared, unowned queue — as of 2026-09-03 each telecaller has their own list.
- **Calls made today** — your own call count for today.
- **Follow-ups due** — how many of your own logged calls have a follow-up date that's arrived.
- **Your target this month** — a progress bar against your monthly ****calls made**** target, if Admin/Manager has set one for you (Team Targets page). "No target set" is normal if they haven't.

2. Attendance

Do **both** every day: use the **Check In** / **Check Out** buttons on your dashboard, **and** punch the biometric machine when you arrive and leave — see the Getting Started guide for how the two work together.

2a. Resources

Sidebar → **Resources** has two tabs — **Files** (a shared internal file library) and **Links** (a company-wide reference list — hosting signup links, scheduling links, and similar you can pass on to a lead). You can view whatever's visible to your role on both, but you **cannot** add, edit, or delete entries — that's Admin/Manager only. Some items are restricted to specific roles, so you may not see everything others do.

3. Lead Generation

Under **Lead Generation** in the sidebar you see only the leads assigned to **you** (via the lead's own "Telecaller" field — separate from its Sales "Owner"). Every new lead is auto-routed to a telecaller the moment it's

created; Admin/Manager can also assign or move one to a different telecaller by hand from the lead's Edit page.

****A lead that was already Converted or Lost before 2026-09-03 won't show up here for you**** — when this feature launched, only still-open leads were backfilled with a telecaller, since a closed lead isn't part of anyone's active calling queue. If you need to look up an old converted/lost lead from before that date, ask Admin/Manager (they always see every lead, regardless of Telecaller assignment).

Going on leave with open leads? When your manager approves your Leave Request, they'll pick another active Telecaller to cover your leads' WhatsApp chats on wadesk while you're out — that access starts the moment they approve and ends on its own once your leave is over, with nothing to undo when you're back. Your own Telecaller assignment on each lead never changes.

Open a lead assigned to you to:

- Read its details, source, and notes.
- **Update it** — change its status (New → Contacted → Qualified, etc.), add a note on what was discussed, set a next follow-up date.

The list itself has a **Next Action** column — the CRM's own read on what to do next for that specific lead, most-specific-first: a stalling objection, a due/overdue commitment shown in the exact words already noted (e.g. "Confirm office visit time", not a generic "follow up"), an upcoming meeting, ask for a Website/GBP link, book with a Sales Expert, a WhatsApp check-in gone quiet, or the best hour to call if nobody's tried yet — falling back to a gloss of the latest note (still on the lead's own page too) only when none of those apply. It's a suggestion, not a button — use your own judgment.

If you mention a concrete promise in a call's notes or a plain note — "he'll visit the office Saturday", "call back to confirm the time" — AI reads it and sets a follow-up reminder + that exact next step for you automatically (you'll get a notification so you can review/adjust it; it never overrides a follow-up you've already set yourself). You can also set the **Next follow-up** field right there in the Add Note box yourself, in the same step as writing what was said — leaving it blank never clears a date you'd already set.

"Call this lead now" popup: the moment a new lead lands in your queue with no call logged yet, a small card appears in the bottom-right corner of every page, oldest uncalled lead first. Click **Log the call** to jump straight to the Log a Call form with that lead pre-selected, or **Snooze** if you can't call right now — pick 30 min, 2 hours, or tomorrow. If you haven't checked in for attendance yet today, that comes first (see

Section 2 above) — once

you're checked in, this is what the same popup guides you through next.

What to call first: the list sorts by **Priority** by default (an overdue follow-up first, then due today, then a Hot lead nobody's followed up on yet, then everything else) — not newest. Switch to **Newest** via the toggle above the list if you want plain chronological order. A red **Overdue** or amber **Due today** badge shows right on a lead's row. The **"Needs attention today"** strip above the list gives one-click counts for all five — overdue, due today, Hot-but-untouched, **unresponsive** (3+ call/WhatsApp attempts with no answer or reply, still open), and **status may need updating** (a New lead that already has a note or call logged against it) — these cover only the leads assigned to you, same as the rest of this page. Tip: if you type a note describing a call, tick 📞 **This was a call** and pick an outcome in the note box — it logs a real call AND moves the lead off New automatically, so it never shows up in that last count. Open an unresponsive lead and you'll see a "🚫 **Not responding — next best action**" box telling you what to try next (switch channels, or the best time to call if you've only tried calls). For a lead already flagged (New with real activity, or unresponsive), open it and click ✨ **Suggest a status** — AI reads its notes/calls and suggests Contacted/Qualified/Lost with a reason; pick from the dropdown (overridable) and click **Apply**.

You **cannot create a brand-new lead** from scratch, **convert** a lead into a client/deal, or **delete** a lead — those stay with Sales/Manager/Admin.

When a lead is genuinely ready to move forward, hand it to the assigned Sales rep (shown on the lead) rather than converting it yourself.

Replying to a lead over WhatsApp: if a lead came in over WhatsApp (the marketing number), you can reply to them without leaving the CRM — open the lead, write your note, and tick the **"Also send as WhatsApp reply"** checkbox before saving (it only appears when the lead has an open WhatsApp conversation). Leave it unchecked for a normal internal note — that's the default, so nothing goes to the client unless you explicitly tick it.

****If a lead asks to pay while chatting on WhatsApp (e.g. "send me the QR code"), don't try to paste a payment link or image into the chat**** — if WhatsApp's 24-hour reply window has closed since their last message, it will silently fail to deliver, and there's no way around that from here (a WhatsApp platform rule, not a CRM limit — you also won't see an error, it just never arrives). Since Quotations aren't available to Telecaller, flag it to the lead's owner (Sales) — they can create a real Quotation and click **Send to Client**, which goes out as an approved WhatsApp template that reaches the client even with the window closed, with a working ****Pay**

Now** button.

Visibility Audit Funnel: Lead Generation → VA Recovery shows the GBP-specific slice of the wider Meta Ads offer funnel — the Meta Ads → offer page → checkout → paid journey for a lead the goal+budget matrix recommends the GBP Visibility Audit for — plus a queue of who's stuck at which stage, worth a follow-up call. The CRM automatically WhatsApps a first invite as soon as one of these leads comes in (Meta's own form never sends them anywhere), then nudges again a few hours later if they stall, so someone already on this list may convert before you even get to them. A row still stuck at checkout or the offer page also gets a green **WhatsApp** → button next to "Open lead" — it jumps straight into that lead's wadesk chat with the matching recovery template already picked and filled in, ready for you to review and send. Below that whole-team queue, **Your gaps** and **Your message log** show just your own leads — who's stuck waiting on a call, or every AI-WhatsApp send to your own leads. A lead's own page also shows a colored "**Visibility Audit:**" badge right under its name, so opening the lead directly tells you the same thing this queue does.

You should not need to manually pick a service on a Meta lead anymore.

The moment a lead's goal+budget answers are known (auto-captured from the ad form, or filled in via the Goal/Budget picker on the lead's own page), the CRM already knows which of the 4 offers fits, has already sent the right automated message, and tags the matching service itself. Don't default a Meta lead's service to GMB out of habit — it's not what decides which offer they get, and the tag isn't doing anything once the recommendation has already resolved.

Reaching checkout or paying re-scores the lead's AI score immediately, so it also rises in the Priority sort above — the two lists stay in sync without you needing to check both.

4. Calling

Use 📞 **Log a call** (top bar) or **Calling** to record every call you make.

Pick the **Lead** you called, the **direction**, **outcome**, and any notes — set a **follow-up date** if you need to call back. Your own call history is under **Calling** in the sidebar. Logging a call against a brand-new (**New**) lead automatically moves its status to **Contacted** for you. Logged one by mistake? A **Delete** link appears next to it — you can remove your own, or a manager/admin can remove anyone's.

A WhatsApp voice call you answer on wadesk gets logged here automatically (added 2026-09-10) — no need to also click Log a call for the same conversation. Only a call that's actually answered counts; a

missed or declined WhatsApp call still shows in wadesk's own chat thread but isn't added here.

Best time to call: open any lead and you'll see a **📞 Best time to call** box above its call history — every attempt already made to that lead (when, and what happened), plus a recommended hour band for your next try. Any hour already tried twice with no answer is left out of the recommendation; if every usually-good hour has already failed for this particular lead, it says so rather than repeating a suggestion that hasn't worked. A brand-new lead with no calls yet, from Website/WhatsApp/Meta Ads/Phone Enquiry, instead gets a suggestion built around **the actual time they reached out** — more specific than the general team pattern, since that's a real signal about when this particular person is around (a Cold Call lead doesn't get this — that timestamp is just data entry, not the prospect's own timing). The same recommendation shows as a short **"Try: ..."** badge right on the Lead Generation list and in My Day, so you know before you even open the lead.

The moment a follow-up you set becomes due, the "what to do next" popup (see Section 2 above) prompts you with it — whatever you typed in as the next action, and a **Log the call** button that jumps straight to the form pre-filled for that lead. Snooze it — 30 min, 2 hours, or tomorrow — if you're not ready yet. Logging a Connected call with no follow-up date shows a small amber reminder before you save — not a hard stop, just a nudge in case you meant to set one.

Stalling on something? A lead's own page, and the Log a Call form when a lead is selected, both have a **"Stalling on:"** dropdown — Budget, Went with a competitor, Trust/credibility, Didn't understand the offer, or Awaiting their decision. Tag it the moment a real conversation stops moving forward. If nobody touches that lead again for 3 days, the "what to do next" popup brings it back up by name instead of a generic reminder. Leaving the dropdown blank on the call form never clears a tag already set on the lead's own page. **Sidebar → Stalling** lists every lead you've tagged this way, most-quiet-first — a single place to see your whole "stuck" list. If a tagged lead then goes 7 days with no note, call, or edit from you, AI drafts a check-in addressing that specific reason (e.g. Budget gets an offer to discuss a staged plan) and notifies you — review and send it yourself, same as any other AI draft.

Their goal, and their Website/GBP link: a lead's own page and the Log a Call form both have a **"What's their biggest goal?"** picker — Generate More Leads, Rank Higher on Google, Grow My Business Online, or Not Sure – Need Expert Advice. Ask this on the call and set it — a Meta Ads lead may already have it pre-filled from their form answer. If they pick one of the

first three, ask for their **Website URL** or **Google Business Profile link** on the same or next call and save it right there (a blue note on the lead reminds you until one's captured). If they pick **Not Sure**, a purple note tells you to hand them off for a call with a **Sales Expert** — use **Create Meeting** on the lead's page to schedule it. Leaving the goal/link fields blank on the Log a Call form never clears what's already saved — same rule as Stalling on. **This can now also get answered on WhatsApp before you ever call** — if a lead messages our Marketing number after hours, the assistant asks this same question (a real tappable list) and follows the same branching itself, so you may find it's already filled in by the time you open the lead. **Once that's done, if Budget is still blank it asks that too** (the same 4 bands as the Budget picker below), so a lead who only ever messages can still end up with a full goal+budget recommendation with nobody having called them.

If nobody follows up on a Not Sure lead: it's a real hand-raise, so it gets a tighter safety net than the usual weekly stagnation email — if there's still no call, note, or WhatsApp reply 6 hours after it went Not Sure, you (and the owner, if the lead has one) get a reminder bell notification; if it's *still* untouched 24 hours in, Admin/Manager get notified too. Log anything against the lead and both reminders stop.

Their budget, and the recommendation it produces: next to the goal picker is a **Budget** picker (Under ₹3,000 / ₹3,000–₹6,000 / ₹6,000–₹12,000 / ₹12,000+) — Meta's ad form asks this too, so it's often already filled in. Once both Goal and Budget are set, a blue

 **Recommendation & Offer** panel shows which of the 4 entry offers (GBP Visibility Audit ₹120, Lead Generation Funnel Audit ₹299, Website + Conversion Growth Audit ₹499, or Personalized Digital Growth Strategy ₹999) fits this lead, plus whether they've viewed their personal recommendation page, viewed the offer, clicked to pay, or already paid. The Website Growth Audit's own checkout page asks for the website URL directly (same idea as GBP asking for a GBP/Maps link) — it prefills from this lead's own Website URL if you've already captured it, and whatever gets submitted at checkout saves straight back onto that same field.

If that recommendation message doesn't seem to have gone out — the panel above still shows "Not viewed yet" a full day later and there's no note on the lead about it — the CRM automatically retries it once, about an hour after the recommendation was first generated. It skips the retry if anyone's already called, noted, or messaged the lead by then, since a live conversation makes the automated message redundant. This is a one-time safety net for a rare send failure, not a repeat nudge — if it's still not gone out after that, just reach out yourself.

Every fresh Meta Ads lead also gets an automatic WhatsApp welcome

the moment its goal+budget resolve to one of the 3 non-GBP offers above (a lead recommended the GBP offer instead gets the Visibility Audit invite) — a thank-you plus "what time works for a quick call?", specifically to get them to reply so WhatsApp's 24-hour window opens up. If one of your leads has gone quiet and that window's closed, open the lead and click  **Send WhatsApp check-in** to send a re-engagement template and try again — limited to once every 24 hours per lead. **You don't have to remember, either** — after 6 hours with no reply and no other contact since (a call you logged or a note you wrote counts too, not just a WhatsApp reply), the CRM sends this same check-in automatically, once — so if you've already phoned the lead, it won't also fire this. A  **Welcome sent, no reply** badge shows on the lead's row (and in the Needs Attention strip) so you know to call, not just wait on WhatsApp.

5. Daily report

At the end of each working day, open **Daily Reports** and fill in a brief summary of your day. Some numbers (calls made) are filled in automatically. Submit it before leaving. You'll get a reminder email at 6 PM.

This page also shows a  **Carried forward** panel for anything left over from before today, a  **Completed today** list with how long each task took, a **Still pending** panel (everything still open for you across every module), an **Activity timeline** of everything you did (browsable to a previous day), and (once submitted) a  **Copy to send** button to paste your report into WhatsApp — see [Getting Started → Daily report](getting-started.md) for the full rundown.

6. What you can't access

The following modules are not available to telecallers: Deals, Quotations, Invoices, Incentives, Tickets, and Clients — those belong to Sales, Accounts, and Support. If a lead needs a quotation or is ready to become a client, that's the assigned Sales rep's next step, not yours.
