

Manager guide

Managers see the **full company dashboard** and the **management reports**, plus every operational module for oversight.

Managers are required to use **Two-Factor Authentication** — see [Getting Started](#) if you haven't set it up.

The company dashboard

Your dashboard shows the whole business at a glance:

- **Stat cards** — Total / Active / Inactive **Clients**, **Total Leads**, and

Tasks Overview, each with the % change vs last month.

- **Services Overview** — a donut of projects by service line (SEO, GMB, Website, Social, Ads...).

- **Task Summary** — Assigned / Pending / Overdue / Completed.

- **Ongoing Projects** — the riskiest active/on-hold projects first (red/orange/yellow/green, same scoring as the full **Project Health** page), each showing the client, % complete, and the current open task with who it's assigned to.

A "View all →" link goes to the full Project Health page.

- **Upcoming Payments & Renewals** — every outstanding invoice due date and every active recurring-billing renewal date, combined into one list and bucketed **Overdue / Next 7 days / Next 30 days / Next 60 days**, so you don't have to check the Receivables Report and Recurring Invoices separately to see what's coming due.

- **My Meeting Invitations** — if a colleague has scheduled a Google Meet call and added you as an internal attendee (see **Create Meeting** below), it shows here with **Accept/Decline** buttons and a direct ****Join Google Meet**** link, so you don't have to open the client's page just to see it.

- **Link panels** — quick access to Daily Reports, the Project Dashboard, and the Reports below.

A separate  **AI Recommendations** section (below the daily "Today" list, Admin/Manager only) is where the **weekly owner digest** paragraph lives (Monday mornings, if AI is enabled) — pipeline, MRR, cash expected, overdue receivables, how many clients Client Radar has flagged, and the Visibility Audit funnel (new Meta leads, invited, viewed the offer page, reached checkout, paid — all for the last 7 days), plus a link to the Employee Performance report's own coaching suggestions and productivity flags. It's a dedicated section now rather than mixed in with daily-habit items like leave approvals and festival greetings.

Resources

Resources in the sidebar has two tabs — **Files** (a shared internal file library: plugin builds, certificates, templates) and **Links** (a company-wide reference list: hosting panel, domain registrar, and anything else the team needs quick access to). Everyone can view what their role can see; you (and Admin) can add, edit, or remove entries on either tab. Each entry can optionally be tagged with a category/department and, separately, restricted to specific roles ("Visible to") — leave that blank to show it to everyone, which is the default. You and Admin always see every entry regardless of that setting. The lists can be filtered by category/department — useful once either grows past a handful of items.

Every client's own page also has a **Links** tab for that specific client's website, Google Business Profile, socials, Drive folder, and similar — anyone who can open the client's page can see these; editing them follows the same access rule as everything else on that page.

Reports

From the **Reports** panel on the dashboard:

Business Overview — the executive snapshot, for a chosen financial year:

- **Partner Performance**: which partners referred which clients and how much won/pipeline/lost business is attributed to each. Click a partner's name to open their page (see **Partner client health** below) — Accounts sees the name as plain text instead, since Partner records themselves are Admin/Manager only.

- **AR Aging, MRR / Recurring Snapshot, and Client Concentration** (% of revenue from your top 5/10 clients): as a manager you see the summary numbers here (e.g. total outstanding, total MRR, the concentration percentages) but not the itemized invoice-level or named-client detail — that's limited to Admin/Accounts. The **Total outstanding** tile itself is clickable — it opens the Receivables Report directly.

- **Pipeline & Funnel**: company-wide open pipeline by stage, win rate, avg deal size, and avg sales-cycle length for the period — full detail, same as Admin. Export CSV.

Cash Forecast (linked from Business Overview, or the dashboard's Reports panel) — a near-term cash view, blending:

- **Recurring expected**: active recurring-invoice templates projected forward month by month.
- **Receivables due**: already-invoiced amounts bucketed by due month (anything already overdue collapses into the first month — it's owed now regardless of the original date).

- **Weighted pipeline:** shown separately and clearly labelled indicative — deals don't have an expected-close date, so it isn't blended into the monthly chart as if it were committed cash.

Employee Performance Report — per person, for a chosen month:

- tasks completed, **on-time %**, calls made, leads converted, **attendance %**, and daily reports submitted.

- Pick the month, then **Export CSV** for records or appraisals.
- Click 🌟 **Generate AI Summary** for a narrative read of the table — trends, standouts, and anyone whose numbers suggest they may need support. For a Sales rep, once there's enough pipeline history it names specific stages where their deals move slower than the team average (e.g. "averages 18 days in Negotiation before moving a deal on, against the team's 9 days") instead of a vague "needs support" line — this may not appear yet on a newer pipeline. It's generated only from the numbers already on the page (never invents a reason behind them) and is ****visible to Admin/Manager only**** — it's never shown to the employee it's about, so use it as a starting point for a conversation, not as a rating you show them.

- **Score and Rank columns:** each person is ranked only against their own role (Sales vs Sales, Support vs Support, etc. — comparing across roles wouldn't mean anything) using the same numbers already in the table, with a **Focus area** showing their single weakest metric this month. A role with fewer than 2 people shows "Not enough peers in this role yet to compare" instead of a rank — there's nobody to compare against. Admin and Manager rows are never ranked (they're not participants). Click **** 🌟 Suggest Improvements for the Team**** to fill the Focus area column with a short, specific, encouraging suggestion per person — same "never invents a reason" rule as the AI Summary above, and same visibility (Admin/Manager only; each employee separately sees only their own suggestion, on their own Dashboard — see [getting-started.md](#)). For anyone with a monthly target set (Team Targets page, above), the suggestion is built around their concrete target gap for the month rather than just their weakest percentile — e.g. how many more tickets/calls/₹ they need to hit it, or an acknowledgment if they're already on pace.

- **Trend indicators:** every number column shows a small colored **(+3)** or **(-2)** next to it, comparing the selected month against the one right before it — green for an improvement, red for a drop. A blank means there's nothing to compare (e.g. no attendance records yet last month, or the person joined this month). This is the same underlying figures as the table itself, just diffed month over month — no new data.

Revenue Report — for a chosen financial year:

- income **by month**, **by service**, and **by client**, split ****recurring vs**

one-time**. Export CSV.

Lead Source Performance — for a chosen month:

- leads captured, converted, and conversion rate **by source** (Website, WhatsApp, Referral, Cold Call, Phone Enquiry, Other).
- for website leads with UTM tracking parameters, a second table breaks the same numbers down **by campaign** (e.g. "google / cpc / seo-pune-2026") — this is what tells you which ad or link is actually worth the spend.
- **Won value** per source/campaign only counts deals that actually closed Won, not just leads that converted to a client and are still in the pipeline. **Avg AI score** shows if one channel tends to bring in higher-quality enquiries. Export CSV.
- Both the **Leads captured** tile and each **By source** row link straight through to **Lead Generation**, pre-filtered to that exact source and the same month you're looking at — so "how many of these actual leads came in" is one click away instead of a manual filter.
- Two **daily trend** tables answer "how many leads came in on which day" — one broken down **by Sales Rep (owner)**, one **by Telecaller** — each a day-by-day row for the selected month with a column per person (plus **Unassigned** where relevant) and a totals row at the bottom. Both are included in the same Export CSV.

Score Calibration — for a chosen month, is the 0-100 AI lead score actually predictive of outcome? Every closed lead (Converted or Lost, grouped by when it actually closed) is bucketed into Cold/Warm/Hot — the same bands shown on every lead's score badge — with conversion rate and average/median days-to-close per band. Meant to be read plainly: if Hot leads aren't converting noticeably more than Cold ones, that's exactly what this report is for surfacing. Export CSV. A **Trend over time** table below it is recorded automatically each month, so you can watch whether calibration is drifting over time, not just this month's snapshot.

Loss Reasons — for a chosen month, why Deals are actually being lost:

- overall distribution across the 5 reasons (Price, Bad timing, Chose a competitor, Went dark, Not a good fit).
- **Loss reasons by rep** — which reasons recur most for each rep. A coaching signal ("this rep keeps losing to price — is our pitch or our pricing the issue?"), not a leaderboard.
- **by lead source** and **by the originating lead's AI score band** (Cold/Warm/Hot) — the same bands shown on every lead's score badge — so you can see whether high-scored leads that still get lost cluster around one particular reason.
- how often a rep accepted vs. overrode the reason AI suggests when a deal is dropped on Lost (see Sales guide, Section 2) — a running check

on whether that suggestion is actually pulling its weight. Export CSV.

Reassignment Analytics — every lead handoff (single, bulk, and a departing Sales user's deactivation handover) is logged with its reason; this report is where that finally gets surfaced, per active Sales rep for a chosen month: leads reassigned away from them (with a reasons breakdown — On leave / Left the company / Rebalancing workload / Other) and leads reassigned to them. A rep with none this month still shows a clean zero rather than being left off the table. Export CSV.

Rep Win Rates — win rate ($\text{Won} \div \text{Won} + \text{Lost}$) per Sales rep for a chosen month, by lead source and by the originating lead's score band. Recorded automatically on the 1st of each month, for the month that just ended — the page shows only what's already been recorded, so an in-progress month shows a "not recorded yet" message rather than a live figure. Measurement only for now: not used anywhere in lead routing or assignment.

AI Usage Report — for a chosen month, which of the CRM's AI features are actually being used: calls per feature (lead scoring, draft replies, monthly wins notes, and the rest), tokens processed, and a rough estimated cost per feature and in total. The cost is an estimate from a configured rate, not a bill — useful for spotting which features are worth the spend and which nobody's touching. A **Feedback** column shows Helpful/Not helpful counts from anyone who's clicked the rating prompt after a draft — a quality signal alongside the raw call count, since a feature getting used a lot but rated poorly is worth a different conversation than one nobody's touched at all. Export CSV.

Ask the CRM — type a business question in plain English ("Which clients are at risk this month?", "What's our win rate on SEO deals?") and get an answer grounded in real figures from the reports above — never invented. If it doesn't recognise the question, it lists what it can currently answer instead of guessing. Every answer links to the full report behind it, and shows the exact figures it was grounded in, so you can double-check the numbers yourself.

Outstanding Receivables — what clients still owe (shared with accounts).

Collections — a client-by-client follow-up worklist (shared with accounts): recurring clients who haven't paid, invoices only partially paid, payment promises that have been broken, and for milestone-billed projects whether the next milestone is marked **Ready to invoice**. Filter by **All clients**,

Direct clients, or one specific partner. Open any partner's page (below) to see the same view already scoped to them.

Contract & Renewal Dashboard (sidebar → **Contract & Renewals**, shared with Accounts and Sales) — the fuller version of the 30-day renewal bell

notification: active recurring contracts ending in the next **30, 60, or 90 days (**toggle between the three**), **each with a** renewal status** you set yourself — Not Started → Discussion → Proposal Sent → Negotiation → Renewed/Lost — so the team can see at a glance who's actually had the renewal conversation and who hasn't. Filter the list by status using the colored chips at the top. The **MRR at stake** tile totals the monthly-equivalent value of every contract in the selected window.

Weekly digest history — see [Email alerts](#) below for the Monday digest itself; the history page keeps every past week's snapshot with trendlines so you can see whether MRR, receivables, and flagged-client count are trending up or down, not just this week's figure.

Oversight

You have access to Leads, Deals, Quotations, Invoices, Projects, Tasks, Tickets, Clients, Attendance, Calls and Daily Reports so you can monitor and step in anywhere. Use the **search bar** to jump to any record.

Covering someone's leads (a day off, or leaving the team): on **Lead Generation, **filter by** Owner** — a panel appears showing that person's open lead count with a one-click **Reassign All** to move every one of them to someone else at once, with a reason and a note left on each lead. See the Admin guide (Section 16b) for the full walkthrough. The list itself also defaults to a **Priority** sort (overdue → due today → Hot-but-untouched → everything else) with a "Needs attention today" strip above it — including an **unresponsive** count (3+ call/WhatsApp attempts, no reply, still open) and a **status may need updating** count (a lead still marked New that already has a note or a logged call — the "This was a call" checkbox in the note box, see the Sales guide, is what prevents this going forward) — same as what Sales/Telecaller see, just showing the whole team's picture for you rather than one person's. Open an unresponsive lead and you'll see a next-best-action recommendation (switch channels, or a status suggestion once both have genuinely been tried) — same as the Sales guide describes. The status summary cards at the top (Lead Generation and Clients both) are clickable — click a number to filter the list to it — and the **Converted** card shows a small "X Won" line so you can see the real close rate without opening each lead; a **deal stage** filter lets you (or a rep) pull up exactly which Converted leads are stuck at a given stage.

Clients — Prospect tile: the Clients list also has clickable Total/Active/Prospect/Inactive cards. **Prospect** is every client record created by a lead converting whose Deal hasn't been Won yet — a quick "who's on the way to becoming a real client, team-wide" view.

Fixing a mistaken call log: a **Delete** link appears on any logged call (Calls tab, lead/client page, or the Calling list) — the rep who logged it, or you/Admin, can remove a wrong or duplicate entry.

Ticket escalations: anyone on Support (or Sales, for their own clients) can click ▲ **Escalate to managers** on a ticket to flag it for you specifically — separate from the automatic SLA-breach email. You get a bell notification, the ticket shows an orange "Escalated" badge, and it stays that way (visible via the **Tickets** → **Escalated** filter, or the count on your **Action Center**) until you click **Clear escalation** on the ticket's page — only Admin/Manager can clear one.

Quotation approvals: every new quotation a Sales rep (or anyone) saves now needs your approval before **Send to Client** unlocks — see ****Central Approval Center below for the queue, or Approve/Reject/Request changes**** directly from the quotation's own page.

Client 360° summary strip: every client's profile page now opens with a row of tiles — **MRR** (active recurring services), **Next Renewal** (the soonest next-bill date among them — always the same date shown as "Next billing" on the Services tab below), and, for roles with invoice access,

Total Revenue (lifetime) and **Outstanding** (clickable — jumps straight to that client's Invoices tab). The Health Score badge next to the client's status (see Client Radar above) sits right alongside these.

Seeing who services which client: open any client's profile and click the **Services** tab. The **Projects** table has a **Team** column showing the Lead and any additional team members for each project/service. This is the fastest way to answer "which of our team handles GMB for ABC Corp?" The **Recurring Services** table now has a **Team** column too, for retainer services (SEO, GMB, social media...) that have no Project of their own — click **Assign** (Admin/Manager/Sales/Support) to pick one responsible employee per service. If that same service also has a live Project, the Project's own team is shown instead — a service only ever shows one answer for "who's working on this," never two.

Below the two tables, **Service Links** holds service-specific URLs (Website URL, GBP link, Instagram/Facebook handles, Search Console...) — click **Add link**, pick the service, and give it any label you like. This is separate from the general company-wide **Links** tab, which still works the same as before.

Requirements and **Assets** are two new tabs on every client's profile:

- **Requirements** tracks what a client still needs to send per service — title, instructions, requested/due/received dates, and who's chasing it. Marking one **Received** can attach the file it came with (****Attach file**), **which also files it into that client's Assets**** tab — the same

file, not a second copy.

- **Assets** is a categorized document library per client (Brand Assets, Website Content, Social Assets, Business Documents, Other). Uploading over an existing asset (**Replace**) keeps every prior version downloadable — nothing is silently overwritten.

Every project also has a **Project Manager** (set on the project's Edit page) who is ultimately accountable for it — a different person can be the Project Manager on every project, and one person can be the Project Manager on as many projects as needed.

Every project also has a **Client Requirement Status** (Pending / Submitted / Received, set on the project's Edit page and shown on its own page) — a quick signal for whether the client has sent what your team is waiting on to move the project forward.

Project Updates → My Services: the Project Updates page has a new **My Services** toggle that filters the list to only projects where you are the Lead or a team member. Useful for managers who also run their own service accounts.

Create Meeting and Meet notes (optional): once an admin has connected NEDS's Google account once (**Profile → Google Account**), anyone on the team can click **Create Meeting** on a client or lead's **Calls** tab to schedule a real Google Meet call through that same connection — it invites the client automatically and shows the link to share directly too, no personal Google account needed per staff member. **Inviting teammates:** the scheduler also has a multi-select of active staff — anyone you add gets a CRM bell notification, a card on their own Dashboard's ****My Meeting Invitations widget with Accept/Decline**** buttons, and a direct **Join Google Meet** link, without needing to be a real Google Calendar guest. Each meeting's own page shows every invited teammate's current status (Pending/Accepted/Declined) next to the client's own name. For a call that already happened outside that flow, **Import Meet Notes** pulls in the recording link, transcript link, and full transcript Google Meet already generated — shown the same way a logged call is. If AI is also enabled, an imported transcript gets a short **AI summary** (Key points / Decisions / Action items), visible to anyone who opens that client or lead's page, including you.

Sales Dashboard

A company-wide view (Sidebar → **Sales Dashboard**, under Sales Pipeline) — same KPI strip/stage-conversion/trend/needs-attention sections described in the sales guide, but unscoped (everyone's deals). Two sections are Admin/Manager only:

- **Rep leaderboard** — per Sales rep: pipeline value, won this month, target

this month, % to target, win rate, avg deal size.

- **Stage dwell time** — below the leaderboard, one row per rep and one column per open stage (New/Contacted/Proposal/Negotiation), showing how many days their deals typically sit there before moving on, alongside the team's own average for that stage. A rep running noticeably longer than the team average is highlighted amber — worth a question in your next 1:1. A cell stays blank until both the rep and the team have enough completed history to make the average meaningful.

- **Save targets** — set the company's monthly and financial-year revenue target, and each rep's individual monthly target, right from the leaderboard row. Leave a field blank to leave that target unchanged — it will never zero out an existing target you don't touch. Targets are optional; nothing breaks if none are set, the progress bars just read "No target set". A blank monthly field (company or a rep's own) shows a **Suggested: ₹...** hint underneath — the trailing 3 months' average won value plus 10%, click it to fill the field, or ignore it and type your own number. It only appears once there's enough recent history to base it on, so it may not show yet for a newer pipeline; there's no suggestion for the financial-year target.

Stalling

Sidebar → **Stalling** (under Sales Pipeline) — every lead and deal anyone has tagged with a "**Stalling on:**" reason (Budget, Went with a competitor, Trust/credibility, Didn't understand the offer, Awaiting their decision), across the whole team, sorted most-quiet-first with a badge once one has gone 3+ days untouched. A **counts-by-reason** tile row above the table gives a one-glance read on what's actually blocking deals company-wide — e.g. if Budget dominates, that's worth raising with the team directly rather than case-by-case. Each row links straight to the lead or deal. Sales/Telecaller each see only their own tagged list on this same page (see their guides); you see everyone's.

Tagging feeds two other places automatically: the "what to do next" popup brings a stalled, untouched-3+-day lead/deal back up by name for whoever owns it, and a tagged lead or deal that then goes 7 days with no note, call, or edit gets an AI-drafted, objection-aware check-in (e.g. a Budget tag gets an offer to discuss a staged plan) — a bell notification tells the owner it's ready to review and send.

Team Targets

Sidebar → **Team Targets** — the same target-vs-actual mechanism as the Sales Dashboard's rep leaderboard, generalized to the 4 other roles. Each role has

one KRA (Key Result Area) it's measured against, since that's what the job actually is:

Role	KRA metric
Support	Tickets resolved
Accounts	Collections recorded (₹)
Intern	Tasks completed
Telecaller	Calls made

For each role: a **role-wide target** for the whole team this month (with a progress bar), and a table listing every active person in that role with their actual figure so far this month and an editable target field. Leave a field blank to leave that person's existing target unchanged, same "never zero out what you don't touch" rule as the Sales targets form. Everyone also sees their own progress bar on their own Dashboard, under "Your target this month" (can be hidden via  **Customize dashboard**, like any other widget). Sales keeps its own separate mechanism on the Sales Dashboard above — this page is only the other 4 roles.

Incentives

Sidebar → **Incentives**. Admin/Manager see every active Sales rep's live monthly incentive (sales this month, current slab, individual incentive, team bonus, total) computed from the same Won-deal figures as the Sales Dashboard, plus:

- **Team bonus pool** — the fixed rupee amount, split evenly across active Sales reps, paid out in any month the company-wide monthly target (set on the Sales Dashboard) is met. Edit and save it here; it applies from the current month onward.
- The company target itself is still set on the **Sales Dashboard** — this page only shows target-vs-actual and links there to change it, so there's one place that writes it.

Numbers shown here for the current month are a live estimate — nothing is locked in until the 1st of the following month, when a scheduled job snapshots each rep's just-ended month into a permanent record. That means an old deal edited after month-end never changes a past month's payout figure.

Manager Action Center

Sidebar → **Action Center** — one page rolling up everything across the CRM that needs your attention right now, instead of checking five separate pages: overdue tasks (team-wide), clients Client Radar has flagged, overdue invoices, tickets whose SLA has actually breached (not just approaching),

contracts renewing within 30 days, and pending follow-up reminders (listed inline, since there's no dedicated page for those yet). Every count links straight through to the real page behind it — Tasks, Client Radar, the Receivables Report, Tickets, or the Contract & Renewal Dashboard — so clicking a number always shows you exactly what's in it. **Stagnant deals** aren't in this list yet — there's no reusable "hasn't moved" definition built for that in the CRM today, only the stagnation *alert emails* (see below), which are a different thing.

Unlike the Approval Center below (which already emails/notifies you the moment something new lands there), nothing on this page pushes a notification on its own — so the "what to do next" popup (see Getting Started → Attendance) now nudges you with a running total whenever any of these counts is above zero, e.g. "12 items need your attention — 5 overdue tasks, 3 clients needing attention, ...", linking straight to this page. It also separately checks in on the team: if a **Sales** rep is falling meaningfully behind their monthly revenue target (see Sales Dashboard → Rep leaderboard below) partway through the month, the same popup prompts you to check in with them first — a missed revenue number outranks the check below for everyone else, if both are true the same day. If someone on Support/Accounts/Intern/Telecaller is falling meaningfully behind their monthly KRA target (see Team Targets below) partway through the month, the same popup prompts you to check in with them, linking to their Employee 360° profile. It also carries two Accounts-journey prompts your way (in case Accounts hasn't gotten to them yet): a Draft invoice still unpriced/unsent 3+ days after creation, and a quotation marked Accepted with no invoice raised 3+ days later — see Accounts guide → Section 1 for detail.

Central Approval Center

Sidebar → **Approval Center** — every pending approval decision across the CRM in one place, so you don't have to check Leave Requests, Quotations, and each project separately:

- **Leave Requests** — **Approve** or **Reject** (with an optional reason), exactly like the dedicated Leave Approvals page.
- **Quotations** — new quotations wait here for your decision before they can be sent to a client. **Approve** clears it to send. **Reject** (with an optional reason) or **Request changes** (a reason is required, so the creator knows what to fix) send it back — the creator can edit and click **Resubmit for approval** to put it back in your queue.
- **Project Updates** — AI-drafted client updates waiting on a project owner's review before they reach the client (edit if needed, then

Approve & Send, or **Discard**) — the same review you'd see on that project's own page, just surfaced here too.

Only genuinely *pending* items show up — once you act on something, it drops off this page and the count at the top updates. Two things the team asked about were deliberately left out: **Content** approval already happens entirely inside SMDost before it ever reaches this CRM, so there's nothing real to approve here; and **Client Requests** isn't a concept that exists anywhere in the CRM yet (clients raise **Tickets**, not a separate "request") — building that would be a new feature, not something to aggregate.

Team Workload & Capacity

Sidebar → **Team Workload** — every active Sales/Support/Accounts/Intern/Telecaller person's open (not-Done) task count and overdue count, grouped by role with each role's own average shown at the top of its group. A person is flagged **Overloaded** when their open task count is more than 1.5× their role's average, or they have 3 or more overdue tasks — the overdue check exists specifically so a lone person in a role (nobody to average against) still gets flagged if they're genuinely behind. Someone with zero tasks shows up too — an empty plate is worth knowing about, not just an overloaded one. Click a name to see their full task list.

Project Health Dashboard

Sidebar → **Project Health** — every active or on-hold project, scored:

-  **Red** — the deadline has passed.
-  **Orange** — the deadline is within 7 days and completion is under 80%, or the project has any overdue task at all (this one applies even to a project with no deadline set).
-  **Yellow** — completion is under 50% and more than half the project's own timeline has already gone by.
-  **Green** — everything else, including a project with no deadline set that isn't carrying any overdue tasks.

A project with no tasks logged yet is treated as 0% complete for this scoring — deliberately, so a project that's gone quiet doesn't slip through for lack of data. Completed projects aren't shown — nothing left to track.

Revenue at Risk

Sidebar → **Revenue at Risk** — one page pulling together three figures that otherwise live on three separate reports: **overdue receivables** (every AR-aging bucket except not-yet-due), **MRR renewing in 30 days** (same figure as the Contract & Renewal Dashboard's own tile), and ****MRR**

tied to Client-Radar-flagged clients**. The headline total is a plain sum of the three and isn't deduplicated — a client can be both overdue on an invoice and Client-Radar-flagged at the same time, so it can appear in two buckets at once. Click any bucket to see exactly what's behind that figure, on the report it came from.

Client Radar

A **Client Radar** sidebar item (and a dashboard banner when clients are flagged) surfaces active clients worth a proactive check-in:

- **No Contact** — no note, call, or ticket in the last 14 days.
- **Declining Activity** — recent touches well below the prior 30 days.
- **Overdue Invoice** — at least one overdue invoice.
- **Growth Opportunity** — only using one service line even though more are active — a natural upsell prompt.
- **Low Satisfaction** — at least one ticket rated 2/5 or below by the client in the last 60 days (clients rate a ticket once it's Resolved/Closed, from the client portal — see [client-portal.md](#)).

Each flagged client also shows a **Health Score** (0–100, worst clients first): starts at 100, then loses 30 for No Contact, 20 for Declining Activity, 25 for Overdue Invoice, and 25 for Low Satisfaction (Growth Opportunity is a positive signal, so it never costs points). The same score shows as a badge next to the client's status on their own Client 360 page. Everything is computed live from existing data, nothing is stored. Click 🌟 **Suggest action** next to a client to have Claude draft a specific next step from that client's flags — generated on demand, per client, so it's never run automatically as a batch.

On a **Low Satisfaction** flag specifically, a second button — ** 🌟 Draft recovery message** — writes a client-facing apology grounded in the actual ticket that was rated poorly (not just the generic flag). Review and personalize it before sending; nothing goes out automatically.

Offer Funnel Dashboard

Sidebar → **Offer Funnel Analytics** — a full analytics view over the whole unified offer funnel: every Meta lead's goal+budget answers now decide which of the 4 offers (GBP Visibility Audit, Lead Generation Funnel Audit, Website + Conversion Growth Audit, Personalized Digital Growth Strategy) fits them, regardless of which service the ad campaign was tagged — see "Meta Ads recommendation + offer funnel" below for the full picture.

All offers — unified funnel

At the top of the page: one combined 5-stage summary (Recommended → Notified via WhatsApp → Viewed their recommendation → Reached the offer/checkout →

Paid) across all 4 offers together, a **by-offer table** breaking those same 5 stages down per offer (GBP included, as its own row), a **goal × budget table** showing how many leads each combination recommends and how many of those actually paid, and a combined daily trend chart. Click any number in the by-offer table to see the actual leads behind it — GBP's own cells reuse the detailed drill-down below; the other 3 offers get their own equivalent list (name, phone, goal, budget, owner, when recommended, a link to open the lead).

GBP detail

Below that: the original, unchanged analytics specific to the GBP Visibility Audit funnel the weekly digest summarizes (see "The company dashboard" above), with a pickable date range instead of a fixed 7 days:

- **Stage counts + conversion %** — eligible → invited (WhatsApp) → viewed the offer page → reached checkout → paid, each stage showing what % of the one before it converted, plus one overall paid/eligible figure. Click any stage tile to see the actual leads behind that number (name, phone, owner, status, a link to open each lead) — no more wondering "which 7 leads viewed the offer page."
- **Daily trend chart** — the same five stages plotted per day, so you can spot exactly which day a drop-off started.
- **Touches by channel** — how many WhatsApp sends the AI automation made vs. how many phone calls Sales/Telecaller logged against a funnel lead (auto-counted from Call Log entries — no extra step for staff). Click the "AI (WhatsApp)" row to open the full **Message Log** below.
- **AI-only vs. staff-assisted conversion** — of the leads who actually paid, how many got a phone call before they paid vs. converted from the automated WhatsApp messages alone. This is the number to watch if you're deciding whether chasing these leads by phone is worth the time.
- **Awaiting service tag** — a callout for Meta leads the CRM genuinely can't route yet, because their ad form never captured goal/budget AND nobody has manually tagged a service on them either (see "Meta Ads recommendation + offer funnel" below — once goal+budget resolve, the service tag is set automatically, so a lead with a real recommendation never appears here even if untagged); links straight to those leads.
- **Failed sends** — a red callout when any AI-WhatsApp message failed to send in the window, linking straight to those leads so someone can follow up manually. Only appears when there's something to act on.
- **Not yet invited** — an amber callout for eligible leads the automation hasn't reached yet (usually just a few seconds/minutes behind, but worth a look if the count doesn't clear).
- 🌟 **AI Activity Summary** — click to generate a two-part AI briefing on

demand: what the AI handled outside office hours (9am-7pm IST — WhatsApp sends and any customer replies), and concrete gaps the team should close right now (untagged leads, a stuck lead nobody's followed up with, an unanswered WhatsApp reply). Nothing is sent automatically and nothing is saved — regenerate any time; it always reflects the current state.

Behind the scenes (not shown on this dashboard yet): every purchase now also records how long it took the payer to pay from their first visit to the offer page ("time to payment"), and every repeat visit to the offer page was already being tracked but is now countable per lead too. Both are measurement only for now — captured so there's a real trend to look at once enough purchases have accumulated, not used anywhere in scoring or routing today.

Message Log ("Message log →" at the top of the dashboard) is the detailed "when and to whom" record behind the AI-WhatsApp numbers: every send attempt (first invite, recovery nudge, payment confirmation, the "audit in progress" update sent ~30 min after payment, and the audit report itself once someone clicks Send Audit Report), the exact time, which lead, and whether it succeeded or failed — filterable by message type and outcome. Use this whenever something looks off in the funnel (a lead who should've been invited but wasn't, a stage that isn't converting) to check whether the automation actually tried and what happened. The "audit in progress" step retries a failing send every 15 minutes but gives up after 5 attempts per channel (WhatsApp and email tracked separately) — a lead showing several failed rows for the same message type has stopped auto-retrying and needs a manual follow-up, not just a wait.

All Visibility Audit purchases (the tile below the stage counts, "View all →") is the true total for the window — every ₹120 payment, regardless of whether the payer ever came through Meta Ads. The **Paid** tile above it and the daily trend chart are both deliberately scoped to just the Meta lead-form → GMB cohort, so a purchase from someone who paid via a manually-shared landing page link (no Meta history at all) won't show there — but it always shows here, tagged **Other** instead of ****Meta lead****, with a link to the matched lead if one exists. Check this list if the two numbers ever disagree and you want to see exactly who accounts for the difference.

The **VA Recovery** worklist (Lead Generation → the "VA Recovery" button) is where you or Sales/Telecaller actually work a stuck lead one at a time — this dashboard is the oversight view, not a place to take action from directly. That worklist also carries two sections personal to whoever's viewing it — **Your gaps** and ****Your message**

log** — so a Sales/Telecaller user gets the same "what's stuck" and "what was sent" visibility you have here, scoped to just their own leads, without needing access to this Admin/Manager-only page. Every lead in the funnel also carries a colored **"Visibility Audit:"** status badge on its own page (e.g. "Reached checkout, hasn't paid") — the same stage this dashboard and the worklist already track, just visible without needing either one open. Once a lead pays, that badge also carries the next action: **Mark audit ready** (once the audit itself is prepared, notifies the lead's owner to schedule the 15-minute walkthrough call) and **Send Audit Report** (emails the report and sends a WhatsApp link, only once that call has actually happened) — see the Sales guide's Lead Generation section for the full step-by-step, since Sales is who normally clicks these.

That same funnel stage feeds the lead's AI score, so a lead who reaches checkout or pays is re-scored immediately and rises accordingly in the Lead Generation page's Priority sort — you don't need to cross-check this dashboard against the Priority list by hand to confirm they agree.

Meta Ads recommendation + offer funnel (the other 3 offers)

Every Meta lead's **Goal** and **Budget** answers now drive an automatic recommendation for one of four entry offers — GBP Visibility Audit ₹120, Lead Generation Funnel Audit ₹299, Website + Conversion Growth Audit ₹499, or Personalized Digital Growth Strategy ₹999 — based on a fixed 16-cell goal × budget matrix, regardless of which service the ad campaign itself was tagged (a GMB-tagged lead can still be recommended into any of the 4, whichever their real answers fit best; the old "GMB tag always means the GBP offer" routing only kicks in as a fallback when goal/budget haven't been captured yet). Once both fields are set (usually pre-filled from the ad form, editable from any lead's own page), a 📄 **Recommendation & Offer** panel appears there showing which offer was recommended and whether the lead has viewed their personal recommendation page, viewed the offer, clicked to pay, or paid. The team-wide rollup for this — by offer, and by goal × budget — is the "All offers" section at the top of the Offer Funnel Dashboard above.

Employee 360°

Sidebar → **Employee 360°** — one consolidated page per employee: this month's performance (the same score/rank/focus-area the Employee Performance report uses), task workload (total/pending/overdue), tickets currently assigned to them, their last 14 days of attendance, and a **Manager Notes** panel for feedback, areas of improvement, and follow-up actions — visible only to Admin/Manager, never to the employee themselves.

This is the same notes feature as the one on the Users → Edit page ([admin.md](#) Section 9), just reachable without needing full Users access — useful if you want to leave a note on someone without also being able to change their account/role.

Two more panels give the full day-to-day picture, not just the monthly summary above:

- **Still pending** — everything still open for that person right now, across every module: tasks, tickets, leads, deals, quotations awaiting a client decision, and unpaid/overdue invoices.
- **Activity timeline** — a chronological feed of everything they actually did (deals moved, quotations sent, invoices raised, payments recorded, tickets worked, calls made, and more), each entry linking straight to the record. Pick a date range (defaults to today) to see a previous day or a whole week at once.

Daily reports & attendance

- **Daily Reports** → **Team** shows what each person submitted for the selected date. Each name also shows a "**X/Y this week**" badge — how many of the last 7 days (excluding Sunday) they've submitted a report for — so a chronic non-submitter stands out (red = zero this week, amber = partial, green = perfect) without checking each day one at a time.
- **Attendance** — use the dropdown on the Attendance page to switch between team members and view their monthly record. You can see all employees except admins.
 - To correct an entry (e.g. someone forgot to check in), go to **Corrections**, pick the date, and update the **status** and **notes**. Times are set by the employee's own check-in/check-out and cannot be edited here — corrections are logged to the audit trail.
 - **Sync from biometric** — click this button on the Attendance page if a punch looks missing or a check-in/out time looks wrong. It pulls fresh data from the biometric machine within about a minute and shows a status line once done. See [admin.md](#) Section 9a for the full biometric setup/troubleshooting.
 - **Leave Requests** → **Review pending** — any admin or manager can approve or reject a leave request (you can't approve your own). The queue shows each request's **Type** (Full Day or Half Day) — approving a Full Day request marks the employee's attendance as **Leave** for each office day in the range (Sundays are skipped), while a Half Day request only marks that one day as **Half Day**, not a full day off. Rejecting lets you add a short note explaining why.
 - **Covering teammate (Sales/Telecaller only)** — if the person requesting leave is Sales or Telecaller and currently owns/handles any open leads, Approve shows an extra "**Covering WhatsApp chats...**" dropdown that you

must fill in before it lets you approve — pick another active Sales or Telecaller teammate. The dropdown prefers someone in the same role, but offers the other role too whenever no same-role peer is available (e.g. a Sales rep covering for the team's only Telecaller) — WhatsApp coverage is just a temporary stand-in, not a change of who owns the lead, so either role can fill in. That colleague automatically gets temporary access to the leave-taker's WhatsApp chats on wadesk (their own Marketing-line chats stay untouched), starting as soon as you approve and ending on its own once the leave period is over — nothing to remember to undo. If the person has no open leads, or isn't Sales/Telecaller, Approve works as normal with no extra step. Both the employee's own Leave history and **Team Leave Records** show who's covering, if anyone.

- **Work From Home** → **Review pending** — same approve/reject flow as Leave Requests, one level up in the sidebar, but approving a WFH request never touches attendance — the employee is still working, so they check in/out from Attendance as normal. Approving just marks the days as remote (shown as a **Remote** badge on their Attendance page) so you know where they're working from. **Team WFH Records** gives the same full filterable history as Team Leave Records.

Best Employee of the Quarter

Best Employee in the sidebar (visible to everyone — Admin/Manager get the full review queue, everyone else sees only their own past approved awards). Each financial-year quarter (Apr–Jun, Jul–Sep, Oct–Dec, Jan–Mar), AI reviews the same numbers already used for Employee Performance ranking — tasks, on-time %, calls, leads converted, attendance, daily reports — and suggests a winner per department (Sales/Support/Accounts/Intern/Telecaller) plus one company-wide "Best Employee of the Quarter." A department needs at least 2 eligible people that quarter to get a suggestion — not enough peers means no award that quarter, not a fabricated one.

This runs automatically right after quarter close, but nothing is announced yet — each suggestion lands as a **Pending review** card with the AI's pick and a draft citation, both editable. As Admin/Manager you can:

- **Approve as-is**, or change the **Winner** dropdown to a different eligible person in that department first (the citation textarea stays editable either way) — Approve commits whatever's in the form.
- **Reject** if no one should win this quarter.

Approving notifies the winner (bell) and posts the citation to the ****Notice Board**** automatically — no separate step. It's recognition only: a certificate PDF (download link appears once approved), no reward amount tracked in the CRM. Use **Generate / regenerate** on this page to re-run a

quarter manually (e.g. after a data correction) — an already-approved award for that quarter is never touched by a regenerate.

Content collaboration (Partners)

When NEDS works with an external content agency, use the **Content Collaboration** module to track what has been commissioned, where it is in the workflow, and when it was published.

Setting up a partner

Go to **Partners** in the sidebar. Add the agency with a name and (optionally) email and phone. One partner record covers all the projects you work with them on.

Tracking agency-sourced deals

When a deal was introduced to NEDS by a partner agency (rather than the client coming to us directly), open the deal and set the **Referred by** dropdown to that agency. This is separate from the content collaboration workflow — it answers "how did we get this client?" at the deal level, so you can see over time which agencies are generating business for NEDS. Leave it blank for direct clients.

Two workflow types

When adding a content piece to a project, choose the workflow:

Workflow	What it means
Agency-led	Agency creates the full content (copy + visuals) and delivers to NEDS. Starts in <i>*Pending from agency*</i> .
NEDS-led	NEDS writes the copy/brief, sends it to the partner, partner creates images/video and sends back. Starts in <i>*Copy drafting*</i> .

Auto-sync from SMDost: For NEDS-led pieces, you don't need to add them manually. When the team clicks **Send to agency** on a content piece in SMDost, the CRM automatically creates a **NEDS-led** content piece on the matching project (status: **Sent to partner**), pre-filled with the copy text. Just open it and generate an upload link for the partner — no copy-paste needed.

Status flow

Agency-led: Pending from agency → Received → Approved → Scheduled → Published

NEDS-led: Copy drafting → Sent to partner → Received → Approved → Scheduled → Published

Advance the status using the **Move to...** button on the content piece detail page.

When a piece is marked **Published**, the timestamp is recorded automatically.

Secure partner upload link

Instead of emailing files back and forth, you can generate a secure upload link for the partner:

1. Open the content piece → click **Generate upload link**.
2. Copy the URL and send it to the partner (WhatsApp, email, etc.).
3. The link is valid for **7 days**. The partner visits the URL, selects their files (images, video, PDF), and clicks Upload — no CRM login needed.

1. When they upload, the status automatically advances to **Received** and the files appear in the **Attachments** section (marked **Partner upload** in yellow).

Only admins and managers can generate upload links. If a link expires before the partner uploads, just generate a new one — it replaces the old token.

Google Drive links

You can store a Google Drive link on each project (the shared folder) and also on individual content pieces (a specific file or sub-folder). These appear as clickable links on the project page and on each piece — handy when you prefer Drive over the upload link.

To set the project-level folder link: **Edit project** → **Google Drive folder link**.

Monthly volume

Up to 18 content pieces per client per month is normal. Filter the content list by status or platform using the chips at the top of the index page.

Festival greeting drafts

For any client with an active Social Media or GMB project, the CRM automatically drafts a festival greeting caption with AI 7 days ahead of each festival in the **Festivals** calendar (admin-managed) and adds it to that project's content queue — look for the 🎉 badge next to the title. Review and edit it like any other content piece before it goes anywhere; nothing is posted automatically. If a festival you expect to see isn't showing up, check with an admin — only fixed-date holidays are pre-loaded, so lunar/regional festivals (Diwali, Holi, etc.) need to be added each year.

Partner client health

Click a partner's **name** on the Partners list (or from Business Overview's Partner Performance table) to open their page. Alongside their contact details, it shows:

- **Your Account** (reseller partners only — one with a "Bill to" customer set on the Edit page): a reseller partner's referred clients are all GST-billed to one consolidated customer record instead of individually, so this section shows that account's own real invoices (number, status, due date, amount, balance) — the actual number to reference for that partner, since the "Billed — last 6 months" per-client breakdown below will correctly show ₹0 for every one of their individual referred clients.

- **Billed — last 6 months:** total invoiced (issued, not just paid) for that partner's clients, as 6 month-by-month tiles plus a per-client breakdown below. Every referred client appears in the by-client table, even one billed nothing in the window — so it can't be mistaken for the (narrower) client health table below it, which only lists clients that actually need attention.
- **Quotations:** every quotation for that partner's referred clients, with status, amount, and date. This is the proposal-stage view; "Billed" above only shows once something's actually been invoiced. The partner sees this same list (with a Download PDF button) on their own Partner Portal dashboard, so there's no need to forward quotations to them separately over WhatsApp or email anymore.
- **Client health:** the same collections/delivery table as the Collections report (above), already filtered to that partner's referred clients — who hasn't paid, who's only partially paid (with the oldest overdue invoice's age shown in both days and an approximate month count), and how each active project is progressing.
- **Referral Settlements:** a recurring, month-by-month view — separate from the one-time Commission section above — of what's owed between NEDS and the partner for each referred client's recurring services. Set up per client on the Client's Edit page: ****Who collects payment for this client?**** (NEDS collects — the default, NEDS invoices the client and then owes the partner a share; Partner collects, where the partner invoices the client outside the CRM entirely, so no NEDS invoice is created for that client at all, and the partner instead owes NEDS a share of what they collected; or NEDS collects — via third party, for a client the partner has routed through a separate company they have a tie-up with — pick that company on the same form, NEDS invoices IT instead of the client, and it in turn bills the client directly) and a ****Referral share %**** for that client. For a NEDS-collects client (via third party or not) the monthly figure is worked out automatically from real invoices on the 1st of the following month; for a Partner-collects client, since there's no invoice to read from, enter the month's collected amount yourself right on this page. Either way, once the money has actually changed hands, click **Mark Settled** on that row — the partner sees the same grid (with amounts) and a live running total of what's still owed, in either direction, on their own Portal dashboard. Useful when a partner asks "how are my clients doing with us," "what have we billed through you lately," or "what do we owe each other this month," or before a check-in call with them.

Note: quotations and the Partner Portal both key off the client record's own **Referred by (agency)** field (set on the Client's Edit page) — not the Deal-level **Referred by** dropdown described above. Set both if you want a client's deals *and* their quotations/portal visibility attributed to the same agency.

Reseller billing

Some partners resell NEDS's services under their own name — they have their own clients, and NEDS should invoice **the partner**, not each individual client. If a partner is set up this way (**Partners → Edit → Bills as reseller for**, Admin only — see the Admin guide), any new quotation or invoice created for one of their referred clients automatically bills the partner's own client record instead, with an amber notice on the quotation/invoice form confirming who it's really being billed to. The client you originally picked stays linked for internal tracking (deals, projects, tasks) — only the actual GST bill-to party changes.

Where a reseller-billed client's own invoice/service actually shows up: since the GST bill goes to the reseller, not the client, it never appears on that client's own Invoices/Services tabs unless the recurring invoice template (or the invoice itself) is linked to one of the client's own Projects — see Accounts guide → Recurring invoices → Project field. Once linked, that client's own Client page correctly lists it, tagged **Billed via {reseller}** in amber, alongside their real Health Score reflecting it too (an overdue reseller-billed invoice now trips the same Overdue Invoice flag as a directly-billed one). A client with no Project link at all will still look empty on their own page even though real billing exists for them — check the reseller's own Partner page (above) in that case, or add the Project link yourself.

Notice Board

Notice Board in the sidebar (Admin/Manager only) is for posting time-bound company notices — office closures, holidays, policy changes, service updates — without relying on email or WhatsApp. Each post has a title, message, **audience** (Staff only, Clients only, or both), a start time, and an optional end time (blank = standing notice, no expiry); check **Pin to top** to keep one above newer posts.

A Staff/Both post shows as a dismissible 🚩 banner at the top of everyone's Dashboard; a Clients/Both post shows the same way on the Client Portal home page. Nothing to manually take down — a post stops showing once its end date passes, and only shows once its start time arrives.

Team Nudges

Team Nudges in the sidebar (Admin/Manager only) is for assigning a targeted, trackable reminder to a specific role (or everyone) — unlike a Notice Board post, which is just a broadcast. Set a **title**, optional **description**, **target** role, **recurrence** (One-time or Weekly), and — for weekly nudges only — an optional **auto-detect** check that clears the reminder for someone automatically once they've done the real thing (e.g. logged a Ticket), no manual click needed.

Each targeted person sees it as a card on their own Dashboard with **Done/Snooze 3d** buttons. This page's **team completion overview** always shows the real per-person status (Pending/Snoozed/Done) — snoozing only hides a nudge from that person's own view, it never hides the true status from you here.

Scheduled maintenance tasks

Every morning at **8 AM**, the CRM automatically creates recurring maintenance tasks for each active project and assigns them to the project lead (or project owner if no lead is set) with an in-app bell notification — no email.

As a manager, what you need to watch:

- Open **Project Updates** → **any project** to see all tasks including auto-created ones. Overdue maintenance tasks show with the same red overdue flag as manual tasks.
- **Emptask** defaults to hiding these routine tasks (filter dropdown shows "Assigned tasks") so the list isn't dominated by hundreds of maintenance checks — switch to "Routine maintenance" or "All tasks" in the filter bar when you specifically need to audit them.
- Above the filter bar, a **Team workload** table shows each person's total tasks, status breakdown, and overdue count (assigned + routine combined) — click a name to see their full list.
- The **Employee Performance Report** (Reports on the dashboard) counts these tasks in each person's on-time completion %. If someone's % is dropping, check whether maintenance tasks are being dismissed without being marked Done.
- If a project isn't generating tasks, verify the project **status is Active** and a **service is set** on it. On-hold or completed projects are skipped.
- To trigger tasks for a missed date (e.g. after adding a new project mid-month), SSH into the server and run:

...

```
php artisan app:dispatch-scheduled-tasks --date=YYYY-MM-DD
```

...

Automated integrations

The CRM runs automated workflows with **Drishti** and **Social Media Dost**.

As a manager, what you need to know:

- **When a deal is Won**, the client is automatically provisioned in both tools — no manual re-entry. Check the client's Activity tab to confirm.
- **When SMDost brief is approved**, a draft invoice appears in the CRM for accounts to price. Watch for the notification if you oversee billing.
- **When SMDost content is sent to agency**, a *NEDS-led* content piece is auto-created in the CRM project (status: *Sent to partner*) with the copy already filled in. Open it and generate an upload link for the partner.
- **Client portal SSO** — clients with linked Drishti or SMDost accounts see one-click login buttons on their portal dashboard. If a client asks why the button is missing, check that their deal has been Won (which sets the external IDs).
- **Monthly briefs** are auto-created on the 1st of each month. If a client's brief didn't appear in SMDost, check that their project service is set to Social Media or GMB and that the SMDost Client ID is set on their CRM profile.

For full details and troubleshooting, see the

[Integrations guide](#).

Notification Settings — pause the "what to do next" pop-up

Notification Settings in the sidebar (Admin & Config) has a single switch: **Pause for everyone** turns off the "what should I do next" pop-up (see the Getting Started guide) for the **entire team**, every role, until an Admin or Manager clicks **Resume for everyone** — no timer or expiry, it stays off until someone turns it back on. Useful for an all-hands, a demo, or any stretch where you don't want the pop-up interrupting anyone. Separate from the personal **Snooze** button on the pop-up itself, which only defers one prompt for one person.

Bell notifications

As a manager, you receive bell notifications for:

- 🏆 **Deal won** — whenever any deal is marked Won, you and all admins are notified with the deal title, client name, and value.
- ⚠️ **Recurring invoice due in 7 days** — every morning at 8 AM, if any recurring-linked invoice is due in 7 days and hasn't been paid, you're alerted alongside the accounts team so you can follow up if needed.
- 🚩 **Payment promise broken** — the morning after a client's promised payment date passes with the invoice still unpaid, you're alerted alongside the accounts team. Fires once per promise, and again if a new promised date is

set and also breaks.

- 📅 **Contract renewal due soon** — when an active recurring contract's end date is within 30 days, you and the accounts team (plus that client's sales rep) are notified once. Fires again if the contract is renewed to a later date and that new date later comes within the window too.
- ✅ **SMDost brief approved** — when a brief is approved in SMDost, a draft invoice appears in the CRM for accounts to price.
- 🌳 **Leave request submitted / reviewed** — whenever anyone requests leave, you and all other admins/managers are notified with their name and dates. You'll also see a banner on your dashboard when there are pending requests.
- 🔔 **Untouched lead escalation** — if a brand-new lead is still untouched (no note, call, or edit) an hour after it landed with its owner, you're notified — its owner already got their own reminder at 20 minutes. Worth a nudge to the rep, or reassigning it (see below) if they're unavailable.
- 🗨️ **Possible duplicate lead** — when a WhatsApp message from an unknown number creates a new Lead whose name closely matches another Lead created in the last 14 days under a different phone number, you're notified immediately (this is the "same customer, different number" pattern — their own WhatsApp number, not the one they typed into a form). The notification links straight to Merge Leads with both records already selected — nothing is merged automatically.
- 🆕 **New client onboarded** — the first time any payment lands against a client (staff-recorded, an advance applied, or an online Razorpay payment), you and all admins are notified once with the client's name, their active services, and the amount paid — a one-time milestone, not fired again on later payments from the same client. Also see the **Pending Approvals** tile on your Dashboard, which links straight to the Approval Center's queue of leave requests, quotations, and project updates waiting on you.

Email alerts

Morning digest (9 AM daily) — your own personalised summary: overdue tasks, tasks due today, call follow-ups, lead/deal follow-ups, and open tickets assigned to you. If AI is enabled, it opens with a short AI-written line on what to prioritise — the same line also shows as a banner on your dashboard for the rest of the day.

Project Updates Digest (9:15 AM daily, if AI is enabled) — a leadership-only summary of yesterday's AI-drafted client updates (drafted vs. approved & sent), any drafts still awaiting review after 2+ days, and any active project with no completed task or note in 5+ days. Only sent when there's something to report. See the Admin guide's AI section for the full breakdown.

Weekly owner digest (9 AM Monday, if AI is enabled) — a leadership-only paragraph synthesizing the week ahead: pipeline, MRR, cash expected, overdue receivables, and how many clients Client Radar has flagged. Also shows as a Monday dashboard banner. The paragraph itself is only sent when AI is on — see the Admin guide's AI section for the full figure list. A "Weekly digest history →" link on the dashboard opens the full week-by-week history with trendlines, which is recorded every Monday regardless of whether AI is on.

Stagnation alerts (10 AM daily) — if any lead owned by a team member has had no activity for 7 days, or a deal for 10 days, the owner is emailed automatically. You don't need to chase people — the system does it. If a lead is still untouched **10 days** in (3 more days past the owner's own email), you get a bell notification too — the system's safety net for when the owner's own daily email hasn't been enough.

Not Sure lead escalation (checked hourly) — a lead that explicitly asked for expert advice (goal = Not Sure) gets a much tighter version of the same safety net, since it's a real hand-raise rather than passive drift: the owner/telecaller already got an immediate bell notification the moment the lead was tagged, and if there's still no call, note, or WhatsApp reply from them **6 hours** later, they get a reminder; if it's **still** untouched **24 hours** in, you get a bell notification too, re-firing daily until someone logs something against the lead. If the same lead has also gone unaddressed long enough to trip the generic stagnation alert above, you only get one escalation about it per day, not two.

Tip

Check the **SLA at-risk** tickets and the **Overdue follow-ups** widget on the dashboard regularly — both are leading indicators of service and sales health. The stagnation alert emails give you a daily safety net for cold leads and deals.

SLA breach emails: when an open ticket passes its SLA deadline you receive a one-time email showing how long overdue it is, the client, channel, priority, and assignee, plus a direct link to the ticket. The email fires once per ticket — no repeat hourly alerts. To see all currently breached tickets, go to **Tickets** and tick the red **SLA breached** checkbox in the filter bar.
