

Sales guide

Your workflow runs **Lead** → **Deal** → **Quotation** → **Invoice**. Here's how each step works in the CRM.

Your dashboard

When you log in you'll see:

- **Follow-ups due** — leads you need to chase today.
- **Won this month** — value of deals you've closed.
- **Open pipeline by stage** — your live deals and their value.
- **Overdue tasks alert** — if you have tasks past their due date, a red banner

appears with a direct link to your task list.

- **Your Productivity This Month** — your rank among other Sales staff this month (e.g. "#2 of 5"), an overall score, and your single biggest opportunity area (e.g. "leads converted"). Private to you — nobody else sees your rank, and you don't see anyone else's. If AI is enabled, click **Get tips to improve** for a short, specific suggestion based on your own numbers. Shows "Not enough peers yet to compare" if there aren't at least 2 Sales staff yet.

Resources

Sidebar → **Resources** has two tabs — **Files** (a shared internal file library) and **Links** (a company-wide reference list). You can view whatever your role can see on both; adding, editing, or removing entries is Admin/Manager only. The **Links** tab is worth checking before you improvise over WhatsApp: it often has the exact link you need to hand a client or lead — tagged **Client Signup Link** (e.g. a hosting or payment-gateway signup link when a client wants to buy one) or **Scheduling Link** (e.g. "Connect with Sales Team" to book a call) — rather than you tracking one down or copy-pasting an old one from memory. Some items are restricted to specific roles ("Visible to") — if something you expect isn't there, it may simply not be tagged for Sales; ask Admin/Manager to add or open it up. Every **client's own page** also has its own **Links** tab, separate from this — that client's website, Google Business Profile, socials, Drive folder, and similar. Anyone who can open the client's page can see these.

1. Leads (Lead Generation)

You only see leads you own (or that are unowned) here — not another Sales rep's leads (fixed 2026-09-03; this used to show everyone's).

"Call this lead now" popup: the moment a new lead lands in your queue with no call logged yet, a small card appears in the bottom-right corner of every page (checks every ~45 seconds) telling you who to call, oldest uncalled lead first. Click **Log the call** to jump straight to the Log a Call form with that lead pre-selected, or **Snooze** if you can't call right now — pick 30 min, 2 hours, or tomorrow, and it'll come back then, moving on to your next oldest uncalled lead once you've logged one. If you haven't checked in for attendance yet today, that comes first (see [Section 5](#))

— once you're checked in, this is what the same popup guides you through next. It's the first piece of a larger "what should I do next" guide the CRM will keep building out.

The top of the page shows **summary cards** — Total, New, Contacted, Qualified, Converted, Lost — a quick read on your pipeline before you scroll the list. They reflect your leads regardless of any filter you've applied to the list below, so they stay a stable overview. **Each card is clickable** — click any number to jump straight to the list filtered to that status (click **Total** to clear the status filter and see all of yours). The **Converted** card also shows a small **"X Won"** line underneath — Converted only ever means the lead became a real Deal, not that it's a closed sale, so this tells you at a glance how many of those Converted leads have actually been won without opening each one. The list itself has a **Next Action** column — the CRM's own read on what to do next for that specific lead, ranked most-specific-first: a stalling objection to follow up on, a due/overdue commitment (showing the exact words a rep — or AI — already noted, like "Confirm office visit time" or "Send proposal", not a generic "follow up" message), an upcoming meeting, sending a quotation on a converted deal that has none sent, scheduling a meeting on a deal that's reached Proposal/Negotiation with none held yet, asking for a Website/GBP link, booking a Sales Expert meeting for a "Not Sure" lead, a WhatsApp check-in gone quiet, or the best hour to call if nobody's tried yet — falling back to a gloss of the latest note (still on the lead's own page too) only once none of those apply. It's a suggestion, not an action button yet — use your own judgment. Two places feed that specific wording (like "Confirm office visit time") automatically: logging a call, and adding a plain note. If you mention a concrete promise — "he'll visit the office Saturday", "call back to confirm the time" — AI reads it and sets a follow-up reminder + that exact next step for you (you'll get a notification so you can review/adjust it; it never overrides a follow-up date you've already set yourself). You can also set the **Next follow-up** field right there in the Add Note box

yourself, in the same step as writing the note — leaving it blank never clears a date you'd already set.

What to work first: the list sorts by **Priority** by default, not newest — an overdue follow-up always comes first, then a follow-up due today, then a Hot lead nobody's followed up on yet, then everything else. Switch to **Newest** (toggle above the list) if you want plain chronological order instead. A red **Overdue** or amber **Due today** badge shows right on a lead's row when relevant. Above the list, the **"Needs your attention today"** strip gives you five one-click counts — overdue, due today, Hot-but-untouched, **unresponsive** (3 or more call/WhatsApp attempts with no answer and no reply, on a lead that's still open), and **status may need updating** (see below) — scoped to your own leads. Open an unresponsive lead itself and you'll see a **"🔒 Not responding — next best action"** box telling you exactly what to try: switch channels if you've only tried calls (or only WhatsApp) so far, including the historically best time to call when there's enough data; once both channels have genuinely been tried with nothing back, it points you to the status suggestion below instead of leaving you guessing.

Keep "New" honest — the "This was a call" shortcut: a lead only counts as genuinely untouched while it's **New**. The moment you log any real outreach against it — a call via **Log a call**, or a note where you tick **📞 This was a call** and pick an outcome right there in the note box — it auto-promotes to **Contacted**, no separate status edit needed. If you type a plain note describing a call without ticking that box, the lead stays New with real activity against it — a purple **** 🍷 Status may need updating**** note appears under its Status badge (and it's counted in the strip above), so it doesn't silently look untouched to you or anyone scanning the New tile.

Fixing an already-flagged lead: open the lead itself — a flagged lead (New with real activity, OR unresponsive after 3+ real attempts on both channels) shows a **🌟 Suggest a status** button. Click it and, if AI is enabled, Claude reads the lead's own notes and calls and suggests Contacted, Qualified, or Lost with a one-line reason — e.g. "they asked for a formal quote" → Qualified, or "no response on either channel after several real attempts" → Lost for a genuinely dead unresponsive lead. Nothing changes automatically — pick the status from the dropdown (the AI's pick is pre-selected but you can choose a different one) and click **Apply**. If AI can't suggest anything, or is off, you still get the same dropdown to pick from yourself.

A Converted lead that isn't Won yet: once a lead converts, its Status column shows **Converted** plus a small caption underneath describing

what actually happened to the Deal — "**Deal: Negotiation**", ***Deal: Proposal" (**gray**), "Deal: Won" or "Deal: Won (partial payment)"** (green), or "**Deal: Lost**" (red). Use the **deal stage** filter (next to the other filters above the list) to pull up exactly which of your Converted leads are stuck at a given stage — e.g. filter to Negotiation to see every one that needs a push to actually close. A lead's status never reverts once it's Converted, even if the resulting Deal is later Lost — that's intentional, it keeps the historical record of "this became a real opportunity" separate from how that opportunity turned out.

If you leave a brand-new lead untouched: the CRM reminds you with a bell notification about 20 minutes after a new lead lands with you, if you haven't added a note, logged a call, or edited it yet. If it's still untouched an hour in, your manager gets notified too — so it's worth a quick note or call even just to log "left a voicemail" and clear it. Arriving here from a **Lead Source Performance** report link (Manager guide) automatically filters the list to that exact source and month, so the number you clicked and the leads you land on always match.

1. **Lead Generation** → **Add Lead**.
2. Fill in name, company, phone/email, **source**, the **service** they're interested in, and an **estimated value**. Assign an **owner** (usually you). An optional **Alternate phone** field is there too, for a second number (e.g. WhatsApp vs. office line) — it's shown on the lead's page but isn't used for anything automatic (duplicate-detection only checks the main Phone field).

1. Save. A **score badge** (0–100) appears on the leads list within a minute — higher means more promising. Hover over it to see the one-line reason (e.g. "Company provided, specific service request, phone available — follow up promptly"). The score updates automatically whenever you edit the lead. The lead page also shows the AI's estimate of their **budget, urgency,** and whether the requested service looks like a good **fit** for them.

Score ≥ 70 is a 🔥 Hot lead — its owner gets an immediate bell notification instead of waiting for the next morning digest, so you can call while the interest is fresh.

Note: leads that existed before AI was enabled show no badge until you open them, make any edit (even adding a note), and save.

Auto-assignment: if a lead comes in with no owner (e.g. from the website form or an unmatched WhatsApp number), the CRM automatically assigns it to whichever active Sales user currently has the fewest open leads — so leads never sit unowned waiting for someone to notice them. This runs whether or not AI is enabled. You'll get the usual "New lead" bell notification as soon as you're assigned. An admin/manager-configured routing rule can override

this for a specific campaign or service (Admin guide) — you'll still get the same "New lead" notification either way.

Reassigning a lead (going on leave, rebalancing, or handing off a client):

open a lead you own and click **Reassign** near the top. Pick another active Sales team member and a reason (On leave / Left the company / Rebalancing workload / Other), then confirm. The new owner gets a bell notification, and a note is left on the lead recording who it moved from/to and why — visible to anyone who opens it later. You can only hand a lead off to another Sales peer this way, not to a Manager/Admin. If you're leaving the company entirely, an admin can hand over **all** your open leads at once when they deactivate your account (Admin guide, Section 9) — you don't need to reassign each one yourself first.

Just going on leave for a few days? You don't need to Reassign at all.

When your manager approves your Leave Request, if you currently own any open leads you'll be prompted (via them) to pick a covering teammate — that colleague automatically gets access to your leads' WhatsApp chats on wadesk for the exact leave period, and it reverts on its own the moment your leave ends. Ownership itself never changes, so nothing needs reassigning back when you return. Use the **Reassign** button instead only when a lead should genuinely change hands for good (leaving the company, rebalancing workload).

Campaign source: if a website lead came in through a tracked ad or link, the lead page shows a **Campaign** line (e.g. "google / cpc / seo-pune-2026") so you know which channel it came from before you call.

WhatsApp leads: there are two WhatsApp numbers — a Marketing line for pre-sale enquiries and a Support line for existing clients. A message on the Marketing line creates or updates a **lead** (source = WhatsApp) only when the phone number doesn't already belong to a client — the marketing number is pre-sale by definition, so an unmatched number never gets silently absorbed into Support. If the same number messages again before you've converted them, the CRM adds it as a note on the same lead rather than creating a duplicate. If the number already belongs to an existing client, it's never turned into a lead — it's logged as a note on that client's own record instead, so check there (not Lead Generation) if you're expecting to see it.

Replying to a lead over WhatsApp: open the lead and use the note box — if the lead has an open WhatsApp conversation, you'll see an *****Also send as WhatsApp reply***** checkbox next to it. Leave it unchecked for a normal internal note (the default); tick it and the note is also sent to the client on WhatsApp, and gets a green "Sent via WhatsApp" badge once sent. You don't need to open wadesk.in yourself to reply.

Meta Ads leads: a submission on a Facebook or Instagram lead ad creates a lead automatically (source = Meta Ads). Any question on the ad form beyond name/email/phone/company (e.g. a custom budget question) appears as a note on the lead — except the **"What is your biggest goal?"** question, which fills in the lead's **Goal** field directly (see "Their goal, and their Website/GBP link" below) when the answer matches one of its four options.

A WhatsApp welcome message goes out automatically, too — the moment a Meta Ads lead's goal+budget resolve to one of the 3 non-GBP offers (a lead recommended the GBP offer instead gets the Visibility Audit invite — see "Their budget, and the recommendation it produces" below for how that's decided), the CRM thanks them for reaching out and asks what time works for a quick call. This is deliberately more than a plain "thanks" — getting them to actually reply is what opens WhatsApp's 24-hour window, so you (or the after-hours assistant) can message them freely from then on instead of being limited to approved templates. You'll see a note on the lead once it's sent.

If a lead's WhatsApp window has closed and they've gone quiet: open the lead and click  **Send WhatsApp check-in** (next to the goal picker) — a different approved template asking if they're still interested and inviting a reply, same idea as the automatic welcome but for re-engaging later. Limited to once per 24 hours per lead so it stays a considerate nudge, not a repeat blast. **You don't have to remember to click it, either** — if 6 hours pass with no reply from the lead, and nobody's contacted them since (no WhatsApp reply from you or the after-hours assistant, no call logged, no note added), the CRM sends this same check-in automatically, once. Any of those — including a plain phone call — is treated as real contact and cancels the automatic send; it only ever fires when the lead has genuinely gone unheard-from on every channel. A **  Welcome sent, no reply** badge shows on the lead's row (and in the Needs Attention strip) the moment it's been quiet that long, whether or not the automatic check-in has fired yet — worth a phone call in the meantime, since WhatsApp is a helpful channel here, not a replacement for calling.

Visibility Audit Funnel: Lead Generation → VA Recovery shows the GBP-specific slice of the wider Meta Ads offer funnel — for a lead the goal+budget matrix recommends the GBP Visibility Audit (Section on Their goal/budget below explains how that's decided), how many came in, how many were invited, how many viewed the offer page, reached checkout, and paid — plus the same "who's stuck, at which stage" queue as before. The CRM sends a first WhatsApp invite automatically as soon as one of these leads is created (Meta's own lead form never sends anyone to the offer page on its own); if they stall after that, a separate recovery nudge

goes out 2–4 hours later, both "Stop promotions"-gated templates. Each queued row links straight to that lead's own page so you can act with the usual tools — a lead who converts from either automatic message simply disappears off the list, nothing extra to do there. A row still stuck at checkout or the offer page also gets a green **WhatsApp** → button alongside "Open lead" — it jumps straight into that lead's own wadesk chat with the matching recovery template already picked and filled in (name, lead link); you just review and hit Send, no hunting for the right conversation or the right template. That lead's own page also shows a colored **"Visibility Audit:"** badge (e.g. "Reached checkout, hasn't paid") right under its name, so you don't need to come back to this list to remember why a lead needs a call.

This funnel stage also feeds the lead's **AI score** (and therefore its place in the Priority sort, Section 1 above) — reaching checkout or paying re-scores the lead immediately, since that's real buying intent even before you've made contact. Merely being invited or eligible, with no engagement yet, doesn't move the score either way.

Once a lead pays ₹120 for the audit, the rest of the journey is mostly automatic, with two points where you take over:

1. The moment payment clears, the client gets an automatic thank-you on WhatsApp and email — nothing for you to do.

1. About 30 minutes later, they get a short "work has started" update on both channels too — again, automatic (it retries a few times if delivery fails, then stops and needs a manual nudge from you — check

Your message log below if a client says they never got it).

1. Once the audit itself is actually ready, click **Mark audit ready** on the lead's **"Visibility Audit:"** badge — this notifies you (the lead's owner) to go ahead and schedule the 15-minute Gmeet walkthrough with the client, the same way you'd schedule any other meeting.

1. After you've held that call, upload the finished report file and click **Send Audit Report** — this emails the client the real file as an attachment and sends a WhatsApp message with a link to view it online, both from one click. The button only works once the Gmeet has actually happened — the report is never meant to go out before you've walked the client through it live.

1. From there it's the usual flow: **Send Quotation** (Section 3 below), which now also sends a WhatsApp message alongside the email, and the client can pay a milestone advance online themselves once it's sent.

Below that whole-team queue, two more sections show just **your own** leads: **Your gaps** (your leads stuck waiting on a call, who replied on WhatsApp with no response from you yet, or a Meta lead the CRM genuinely

can't route yet — see below — each with an "Open lead" link) and **Your message log** (every AI-WhatsApp send to your own leads, with the outcome).

You should not need to manually pick a service on a Meta lead to "turn on" anything anymore. The moment a lead's own goal+budget answers are known (auto-captured from the ad form itself, or you fill them in via the Goal/Budget picker on the lead's own page), the CRM already knows which of the 4 offers fits and has already sent the right automated message — and it tags the matching service itself (GMB, Website Design & Development, or Performance Marketing) at that same moment, so there's nothing left for you to set. **Don't default a Meta lead's service to GMB out of habit** — if the goal+budget matrix later disagrees with a manual tag, the system corrects it back the next time that lead's recommendation changes, so a habitual tag doesn't stick around, but it does mean the tag you typed was never actually doing anything. A lead only shows up in **Your gaps** as genuinely needing a service tag when its ad form never captured goal/budget at all — that's the rare case where a manual tag (Edit → Service) is the only signal the CRM has to decide anything.

Automatic nurture follow-ups: if a New lead sits with no note or logged call from you for **1, 3, or 7 days**, the CRM drafts a follow-up message for you automatically — it appears as an " ✨ AI-drafted follow-up (touch N/3)" note on the lead, and you get a bell notification. Copy it into WhatsApp or email (editing as needed) and send it yourself — nothing is ever sent automatically. The moment you add your own note or log a call on a lead, the sequence stops (the CRM assumes you've taken it from here).

A lead the AI answered outside business hours also shows as follow-up due, immediately. The after-hours WhatsApp assistant only ever sends a holding reply — it never books anything or closes a deal — so the moment it replies to a lead with no follow-up already scheduled, the CRM marks that lead as due for a real follow-up right away (no reminder was set before this, and leads were quietly going a day or more without any follow-up as a result). You'll see it as overdue the next time you check your "follow-ups due" list — same list, no separate place to look.

Working a lead:

- Open the lead to add **notes**, see the timeline, and log activity.
- **Log a call** (top bar or the lead page) after you phone them — record the outcome (connected, no answer, follow-up needed). Logging a call against a brand-new lead automatically moves its status from **New** to

Contacted — you don't need to also edit the lead separately just to flip that field. Logged a call by mistake (wrong lead, duplicate entry)?

A **Delete** link appears next to it (Calls tab, lead page, or the Calling list) — only you or a manager/admin can delete it.

****A WhatsApp voice call you answer on wadesk gets logged here automatically**** (added 2026-09-10) — no need to also click Log a call for the same conversation. Only a call that's actually answered counts; a missed or declined WhatsApp call still shows in wadesk's own chat thread but isn't added here.

- **Best time to call:** a lead's own page shows a 📞 **Best time to call** box above its call history — every past attempt made to that specific lead (time and outcome), plus a recommended hour band for your next try. An hour already tried twice against this lead with no answer is dropped from the recommendation (a real connect there just isn't shown yet — if every good hour has already failed, it tells you that honestly instead of pretending there's a better option). For a lead that hasn't had any calls logged yet, and came in via Website, WhatsApp, Meta Ads, or Phone Enquiry, the recommendation is instead built around ****when they themselves reached out**** — a much more specific hint than the team's general pattern for a lead nobody's called yet (Cold Call leads don't get this, since that timestamp is just when someone entered the record, not when the prospect was actually available). A compact **"Try: ..."** badge shows the same thing on the Lead Generation list and in My Day, so you see it before you even open the lead.

If you set a **follow-up date** on the call itself (separate from a lead's own "follow-up due" field above), the "what to do next" popup (Section 1) prompts you with it the moment it's due — whatever you typed as the next action, with a **Log the call** button pre-filled for that lead. This applies to any client call too, not just leads.

If you logged a Connected call with no follow-up date, a small amber note reminds you before you save (not a hard stop — you can still save without one if there genuinely isn't a next step yet).

- **Stalling on something?** Both the lead's own page and the Log a Call form (when logging against a lead) have a **"Stalling on:"** dropdown — Budget, Went with a competitor, Trust/credibility, Didn't understand the offer, or Awaiting their decision. Tag it the moment you notice a real conversation has stopped moving forward. Once tagged, if you don't touch that lead again for 3 days, the "what to do next" popup brings it back up by name — "Budget / financial constraint: [name]" — instead of a generic reminder. Leaving the dropdown on the call form blank never clears a tag you've already set from the lead's own page — you have to pick **"— Not stalling —"** there explicitly to clear it. The same tagging is available on an open **Deal** page too (not once it's Won or Lost).

Sidebar → Stalling lists every lead and deal you've tagged, sorted most-quiet-first, with a badge if it's gone 3+ days untouched — one place to see your whole "stuck" list instead of hunting through Lead Generation and the Pipeline board separately. Admin/Manager also see the whole team's tagged leads/deals here, plus a count-by-reason breakdown (e.g. how many are stuck on Budget vs. Trust across everyone).

If a tagged lead goes quiet, AI drafts a check-in for you — a lead tagged Stalling that then gets no note, call, or edit for 7 days gets an AI-drafted check-in addressing that specific objection (e.g. a Budget tag gets a message offering a staged/installment plan, Trust gets an offer to share a reference or case study) — a bell notification tells you it's ready, same review-and-send-yourself pattern as everywhere else AI drafts something. This is separate from the plain 1/3/7-day nurture sequence for an untagged New lead (described above) — tagging a lead Stalling doesn't stop that sequence, it adds this objection-aware one on top once the tag is set.

- **Their goal, and their Website/GBP link:** both the lead's own page and the Log a Call form (when logging against a lead) have a **"What's their biggest goal?"** picker — Generate More Leads, Rank Higher on Google, Grow My Business Online, or Not Sure – Need Expert Advice. Ask this during the call and set it — for a Meta Ads lead it may already be pre-filled from their form answer. Once it's set to one of the first three, a blue "🌐 **Ask for their Website or GBP link**" note appears on the lead until you've captured one — ask for it on the same or next call and save it in the Website URL / GBP link fields right below the goal picker (or on the Log a Call form itself). If they pick **Not Sure** instead, a purple note tells you to ****schedule a call with a Sales Expert — use Create Meeting**** further down the same page. Leaving the goal/link fields blank on the Log a Call form never clears what's already on the lead — same "only saves what you actually filled in" rule as Stalling on. ****This can now also get answered on WhatsApp before you ever call**** — if a lead messages our Marketing number after hours, the assistant asks this same question (as a real tappable list) and, depending on their answer, asks for the Website/GBP link itself or lets them know a Sales Expert will follow up — either way you'll see it already filled in, or the same bell notification you'd get from tagging it yourself, by the time you open the lead. ****Once that's done, if Budget is still blank it asks that too**** (the same 4 bands as the Budget picker below), so a lead who only ever messages can still end up with a full goal+budget recommendation without anyone having to call them first.
- **If nobody follows up on a Not Sure lead:** it's a real hand-raise, so it

gets a tighter safety net than the usual weekly stagnation email — if there's still no call, note, or WhatsApp reply from you 6 hours after it went Not Sure, you (and the telecaller, if one's assigned) get a reminder bell notification; if it's *still* untouched 24 hours in, Admin/Manager get notified too. Log anything against the lead and both reminders stop.

- **Their budget, and the recommendation it produces:** right next to the goal picker is a **Budget** picker (Under ₹3,000 / ₹3,000–₹6,000 / ₹6,000–₹12,000 / ₹12,000+) — Meta's own ad form asks this alongside the goal question, so it's often already filled in for a Meta Ads lead. The moment both Goal and Budget are set, a blue 📄 **Recommendation & Offer** panel appears on the lead showing which of the 4 entry offers (GBP Visibility Audit ₹120, Lead Generation Funnel Audit ₹299, Website + Conversion Growth Audit ₹499, or Personalized Digital Growth Strategy ₹999) we'd recommend for this exact goal/budget combination, plus whether the lead has actually viewed their personal recommendation page, viewed the offer page, clicked the buy button, or paid — so you know exactly where they are in that funnel before you call. **The Website Growth Audit's own checkout page also asks for the website URL directly** (same idea as the GBP tier asking for a GBP/Maps link) — it prefills from the lead's own Website URL field above when already known, so a lead who already gave it to you isn't asked to retype it, and whatever they submit at checkout is saved straight back onto this same field once the payment goes through.

- **If that recommendation message doesn't seem to have gone out** — the panel above still shows "Not viewed yet" a full day later and there's no note on the lead about it — the CRM automatically retries it once, about an hour after the recommendation was first generated. It skips the retry (and stays silent) if anyone's already called, noted, or messaged the lead by then, since a live conversation makes the automated message redundant. This is a one-time safety net for a rare send failure, not a repeat nudge — if it's still not gone out after that, just reach out yourself.

- On the Notes field, click **Dictate** and speak instead of typing — your browser transcribes it live into the box, and you can still edit before saving. (Chrome/Edge only; the button doesn't appear in browsers that don't support it.)

- If AI features are enabled, you'll also see **Record voice note (Hindi/Marathi/English)** below the Notes field — useful if it's faster to just speak the call recap than to type it. Unlike Dictate, this doesn't need you to speak in English: record in Hindi, Marathi, English, or a mix, and save the call as usual. A background job transcribes and translates it to

English within about a minute; the translated note then appears under your typed notes on the **Calling** page (it shows " 🗣 Transcribing..." until it's ready). Your own typed notes always stay untouched — the voice transcript is a separate block, so review it and correct anything the transcription got wrong (names and numbers occasionally get misheard).

- When logging a call, click **Add follow-up reminder** to expand the reminder section. **Set the date and time manually** to the exact day you want to be reminded — the field starts blank so you pick the right date (not just tomorrow). Add a one-line next action (e.g. "Send proposal", "Call back at 3 PM"). The CRM will send you a bell notification when that time arrives, and it appears in your morning digest. Call follow-ups that are overdue show in red on the **Calling** page — use the **Pending follow-ups** button to filter to just those. ****You don't need to clear a reminder yourself once you've actually reached the person again**** — logging a new call against the same client/lead with outcome **Connected** or **Follow-up Needed** automatically clears any earlier pending reminder for them, even if its date hasn't arrived yet. A **No Answer/Busy** attempt doesn't clear it, since you still haven't actually reached them.

- Set a **next follow-up date** on the lead itself so it shows up in your "follow-ups due" dashboard widget.

- **Draft follow-up (✨)** — click this button to have AI write a suggested follow-up message based on the lead's details and history. It ends with one genuine, specific discovery question about their requirement or pain point (their current setup, what isn't working, their goal, their timeline) — never a generic "let me know if you have questions" — unless the history already shows a real next step in motion (a quotation sent, a meeting booked), in which case it points to that instead. Read it, edit it to match your voice, then send it yourself (WhatsApp, email, or call). The AI never sends anything automatically.

- **Summarize (✨)** — click this button (above the notes list, next to Draft follow-up) to have AI condense a lead's whole notes timeline — including every WhatsApp message on it — into a few sentences. Handy for a lead that's had a long back-and-forth and you want the gist before your next call, without scrolling through everything.

Merging duplicate leads: if the same person or company ended up as two leads (a duplicate WhatsApp enquiry, a repeat website form), tick exactly 2 on the **Lead Generation** list and click **Merge Selected**. On the review screen, pick which record survives, then — per field (name, company, phone, email, source, service, value, owner, status) — choose which of the two leads' values to keep; you don't have to keep everything from the same one. All notes, call logs, meetings, and activity history from the other lead

move onto the survivor, and a note is left recording what was merged in. Everything else the review screen doesn't ask you to pick — their WhatsApp attribution, goal/budget and recommendation, UTM source, a scheduled follow-up, telecaller assignment — carries over automatically too, whichever lead it came from, but only into a field the surviving record doesn't already have a value in; it never overwrites something the survivor already has of its own. The other lead is then archived (soft-deleted, not gone — recoverable if this was a mistake) so it stops cluttering the list.

Converting a lead: when it's real business, open the lead and click **Convert**. This creates a **Client** and a **Deal** automatically and links everything together. The new client appears in the **Clients** list with status **Prospect** (shown in yellow) — they become **Active** (green) automatically when you mark their deal as **Won**. Use the status filter on the Clients page to view Prospects, Active, or all clients.

Send Quotation from a lead: you don't have to convert first. Open any lead and click **Send Quotation**. If the lead isn't converted yet, the CRM converts them automatically (creates the Client and Deal), then opens the Quotation builder with the client and deal already filled in. If they're already a client, it skips conversion and goes straight to the builder. Either way you land on a blank quotation ready to fill in — no manual selection needed.

2. Sales Pipeline

The **Sales Pipeline** board shows your deals in columns by stage:

New → Contacted → Proposal → Negotiation → Won / Lost. It's a working screen — just the board, so you can focus on moving deals forward. The full numbers (KPI strip, stage conversion, trends, targets) live one click away on **Sales Dashboard** — see 2a below.

- **Drag a deal** to the next column as it progresses (or open it and change the stage).
- **Dropping a deal on Lost** asks you to pick why — Price, Bad timing, Chose a competitor, Went dark / unresponsive, or Not a good fit. Pick one and the move completes; the same picker appears if you change the stage to Lost from the deal's own page instead. This is required — a deal can't move to Lost without a reason, so the team can actually see why deals are lost, not just how many.
- If AI is enabled, the picker briefly checks the deal's notes (and its original lead's notes/calls, if it came from one) and pre-highlights the option it thinks fits, with a one-line "why" underneath — e.g. " ✨ Mentioned choosing a rival agency in the last call." It's only ever a suggestion: pick a different one any time with zero extra steps, and a

deal with too little history to go on just shows the plain picker with no pre-selection, never a guessed default.

- Won and Lost are final — once set, a deal's **stage** can't change again.

Its **Value** can still be corrected afterwards, though (e.g. if the final amount was entered wrong) — every report, dashboard, and revenue figure picks up the corrected number automatically.

- A **won** deal can become a **Project** for the delivery team. If you haven't created one yet, the same "what to do next" popup (see Section 1 above) will prompt you with a one-click **Create project now** button right there — no need to open the deal first.

- On a **Client's** page, the **Deals** tab has Edit/Delete links for every deal, including Won ones — handy for fixing a value or removing a duplicate without leaving the client's profile.

- **Referred by** — if a deal came to NEDS through a partner agency rather than directly, open the deal and set the **Referred by** dropdown to that agency. Leave it as "Direct (no agency)" for clients who came to NEDS on their own. This lets management see which deals were agency-sourced vs direct.

- **Value (₹) is required** when adding or editing a deal — enter your best estimate even early on (New/Contacted) and correct it as the deal firms up. It drives every figure on the Sales Dashboard's KPI strip, so a missing or 0 value understates your own numbers.

- **Enter the amount before GST** — not the quotation or invoice total. Once a quotation exists, use its Subtotal line, not the GST-inclusive Total at the bottom. Your Incentive slabs (see Section 5) are calculated directly off this number, so a GST-inclusive Value overstates your own sales for the month by the GST rate.

- **Your confidence (1-10)** — an optional field on any open deal, right next to Value. It's your own honest gut read on whether this actually closes, separate from the stage the deal happens to be sitting in — a deal can be deep in Negotiation and still be a shaky 3, or early in Proposal and a solid 8. Update it as things change; it's for your manager to see where a deal's stage and your real read on it disagree, not a one-time guess to set and forget.

- **Deals like this one** — on a deal's page, a panel shows up to 3 other closed deals (Won or Lost) for the same service, ranked by how close their value is to this one — useful context on how deals with this profile tend to actually go. It needs a service set on the deal to show anything, and won't appear until this service has at least one other closed deal to compare against.

- **Draft follow-up (👉) and Summarize (👉)** — the same two AI buttons from the Lead Generation notes box (Section 1) are also on a deal's own Notes

section, working from that deal's own notes (a deal has no call history of its own — only leads do). Handy once a lead has converted and the conversation keeps going as a deal instead.

- **If a deal goes quiet, AI drafts a check-in for you.** Any open deal with no note or edit for 7 days gets an AI-drafted check-in note automatically — a bell notification tells you it's ready. It's a staff-only draft, same as everywhere else: you review and send it yourself, nothing goes out on its own. This can happen more than once on the same deal — work it, go quiet again for a week, get another draft. **If the deal is tagged "Stalling on:"** (see Section 1 above — the same dropdown is on a deal's own page), the draft directly addresses that objection instead of a generic check-in — a Trust tag gets an offer to share a reference, a Budget tag gets an offer to discuss a staged plan, and so on.

Stale-deal badge — each card shows how many days it's been sitting in its current stage, turning red past 10 days. A red badge is a nudge to follow up or move the deal, not an automatic penalty.

2a. Sales Dashboard

A dedicated page (Sidebar → **Sales Dashboard**, or the link at the top of the Pipeline board) with the full numbers, scoped to your own deals (Admin/Manager see everyone):

KPI strip — seven figures at the top:

- **Open pipeline** — total value of everything still open (not yet Won/Lost).
- **Weighted forecast** — open pipeline value adjusted by a rough likelihood-to-close per stage (New 10%, Contacted 25%, Proposal 50%, Negotiation 75%) — a more realistic number than raw pipeline value, since not everything in New will actually close.
- **Won this month / Won this FY** — value of deals you've won, this calendar month and this financial year (Apr–Mar) to date.
- **Win rate** — $\text{Won} \div (\text{Won} + \text{Lost})$, all-time.
- **Avg deal size** — average value of your Won deals.
- **Avg sales cycle** — average days from a deal's creation to it being won.

Stage conversion — below the KPI strip, what % of deals that ever reached one stage went on to reach the next (New→Contacted, Contacted→Proposal, Proposal→Negotiation, Negotiation→Won). This is built from deal moves going forward only, so each pair shows "Not enough data yet" until at least 5 deals have passed through it — it doesn't reconstruct history from before this feature shipped.

- **Target vs actual** — a progress bar against your monthly (and FY, if set) revenue target, if Admin/Manager has set one for you. "No target set" is normal if they haven't.

- **Won value — last 12 months** — a trend chart, so you can see whether this month is actually better or worse than recent months, not just in isolation.

- **Service-line breakdown** — your pipeline and win rate per service (SEO, Website Dev, etc.), so you can see which services are actually converting.

- **Needs attention** — a plain list of deals that need a look: stale >10 days, an overdue follow-up date, no owner, or a ₹0 value that was never corrected. Each links straight to the deal.

Admin/Manager additionally see a **rep leaderboard** (pipeline, won this month, target %, win rate, avg deal size per Sales rep) and a **Save targets** form to set the company's monthly/FY target and each rep's monthly target.

3. Quotations

1. **Quotations → Create** — or open a **Deal** and click **+ New Quotation** directly on the deal page (the client and deal are pre-filled for you) — or open a **Lead** and click **Send Quotation** (the CRM converts the lead and pre-fills the builder for you automatically).

1. Add **line items** (description, HSN/SAC, quantity, rate). GST is calculated per line (CGST+SGST for Maharashtra clients, IGST otherwise). If a quotation mixes one-time setup work with an ongoing monthly management fee (a common shape — e.g. a website build plus monthly ads management), tick **Recurring** on the line items that repeat every month. This doesn't change billing by itself — it's what lets **Create recurring invoice** (step 7 below) pre-fill correctly later.

- 🌟 **Suggest line items** — when the quotation is linked to a deal that has notes, this button drafts a first pass at the description/quantity/SAC for each line, grounded only in what's actually in those notes (e.g. a note mentioning "client wants a Hindi translation" becomes its own line item). **It never fills in a rate or GST %** — those stay blank on every suggested line, exactly like a manually-added one, so you still price and save it yourself. If the deal has no notes yet, it says so rather than guessing.

1. Add a **Scope of Work** — the paragraph explaining what NEDS will deliver under this quotation, shown to the client above the line items.

- 🌟 **Draft scope of work** — same idea as Suggest line items: when the quotation is linked to a deal that has notes, this button drafts the paragraph for you, grounded only in the deal's notes and service line. It never mentions price, rate, or GST — that's what the line items and totals are for — and it never saves on its own; it just fills the box, so review and edit before saving like any other field. If the deal has no notes yet, it says so rather than guessing.

1. For milestone/project work, add **milestones** (e.g. advance on signing, balance on delivery). Once work starts, whoever runs the project marks each milestone **Pending / In Progress / Done** on the quotation page — that's how accounts knows a phase is finished and it's time to raise the next invoice. The client can also **pay the next milestone online themselves** — the public quotation link (the one the WhatsApp/email send shares, see point 7 below) shows a "Pay ₹X now" button for whichever milestone is next due.

Paying it automatically raises that milestone's invoice and records the payment — nobody on the team needs to do anything, and the milestone shows **Paid** on the quotation page (both yours and the client's) the moment it clears.

1. Save, then **download the PDF** to send to the client.

2. **New quotations need Admin/Manager approval before they can be sent** — every quotation you save starts **Pending approval**, and ****Send to Client**** stays greyed out until a manager approves it (they're notified automatically, and it also shows up on their **Approval Center** page — see the manager guide). You'll see one of three outcomes on the quotation page:

- **Approved** — Send to Client unlocks, nothing else changes.
- **Rejected**, with a note explaining why.
- **Changes requested**, with a note on what to fix — edit the quotation, then click **Resubmit for approval** to send it back into the queue.

1. Open it and click **Send to Client** — this emails the quotation details to the client's billing address and marks it **Sent**. If the client has a phone number on file, it also sends a WhatsApp message with a link to view the quotation online — no extra step, both go out from the same click.

- ****If a client asks to pay while chatting on WhatsApp (e.g. "send me the QR code"), don't try to paste a payment link or image straight into the chat**** — if WhatsApp's 24-hour reply window has closed since their last message, that message will silently fail to deliver and there's no way around it (a WhatsApp platform rule, not a CRM limit). Create a real **Quotation** for them instead (or use an existing one) and click **Send to Client** here — this goes out as an approved WhatsApp template, which reaches them **even with the window closed**, and the link it sends has a working **Pay Now** button (see point 4 above) powered by Razorpay. **Send to Client** can be clicked again any time the quotation needs re-sending, not just once.

It also drops a 3-day **follow-up reminder** onto your own Dashboard automatically (see Getting Started → Follow-up Reminders), so

a quotation can't quietly fall through the cracks — if the client was referred by a partner agency, the reminder names the partner too (e.g. "Follow up with Prajakta Dahake (referring partner)...").

Separately, the "what to do next" popup (Section 1) also picks up any quotation still sitting at Sent with no client decision after 3 days — unlike the Dashboard reminder, it clears itself automatically the moment the quotation is Accepted or Rejected, no need to mark it done.

- **Reseller partners:** if the client you picked was referred by a partner set up as a reseller (see Manager guide → Content collaboration → Reseller billing), you'll see an amber notice near the client field — the quotation is actually issued to the partner's own billing customer, not the client directly. This is expected for those specific partners; the client stays linked for your own tracking either way.

1. When the client agrees, mark the quotation **Accepted**, then ****Convert to invoice**** — accounts takes it from there.

- If any line items were ticked **Recurring**, a ****Create recurring invoice**** button also appears on the accepted quotation. Click it to open a recurring invoice template pre-filled with the client and those recurring line items — pick a service, confirm the start date, and save. The quotation page then shows a link to the recurring template it produced, so the connection between what was quoted and what's now billing monthly stays visible from either side.

All quotations linked to a deal are listed on the deal's page so you can track which version the client accepted.

4. Clients

Clients lists the companies assigned to you, plus any unassigned ones. Only your clients and unassigned clients appear in your list — clients owned by other sales reps are not shown. Open a client to see its contacts, notes, calls, deals, invoices and tickets in one place.

The top of the list has clickable ****Total Clients / Active / Prospect / Inactive**** cards, same one-click-filter idea as the Leads cards above.

Prospect is worth checking regularly — it's every client record that exists because one of your leads converted, but whose Deal hasn't been Won yet. In other words: your "on the way to becoming a real client" list, in one place, separate from your already-Active clients.

Every active client's page opens with a **summary strip** — **MRR**, ****Next Renewal**, **Total Revenue**, **and Outstanding**** (clickable, jumps to the Invoices tab) — plus a **Health Score** badge (0–100) next to their status, worst clients scoring lowest. If a client's score has dropped, that's your

cue to check what's changed before it becomes a bigger problem.

If one of your clients has a genuinely **overdue** invoice, the "what to do next" popup (Section 1) will also prompt you with a personal follow-up nudge — separate from Accounts' own collections reminders to the client, this one is just for you to consider reaching out yourself, since a relationship nudge sometimes lands better than an automated one.

Services tab — who's working on what: the **Services** tab on a client's page shows a **Team** column on the Recurring Services table (retainer services like SEO/GMB with no project) — click **Assign** to pick who's responsible. Below the tables, **Service Links** holds service-specific URLs (Website URL, GBP link, social handles...). Two more tabs,

Requirements and **Assets**, track what a client still needs to send per service (with due dates) and store their brand assets, website content, and documents in a categorized library — uploading over an existing file with **Replace** keeps the earlier version downloadable instead of losing it.

Adding clients: use **Clients → Add** for a single client, or **Clients → Import** to upload a CSV file in bulk. Download the template from the Import page — it includes columns for address, owner (type a user's name exactly), and tags (comma-separated, e.g. `seo, retainer`). If you leave the **Owner** column blank, the client is assigned to you automatically. Click **Continue** and wait for "Uploading..." to clear before the step advances — large files take a moment.

Overseas clients (outside India): set the **Country** field to the client's country (e.g. "United States"). This hides the GSTIN and State fields (which don't apply) and tells the system to produce zero-rated invoices for that client — no GST is charged, and the PDF is labelled "Export of Services" automatically. Leave Country as "India" for all domestic clients.

Non-GST clients (domestic): for a domestic client who has arranged to be billed without GST, tick **Non-GST client** on their profile — new quotations and invoices for them default to no GST charged. This is different from Overseas: the client is still in India, NEDS is just not charging GST on their bills. Can still be overridden per document if needed.

Create Meeting and Meet notes (optional): once an admin has connected NEDS's Google account (**Profile → Google Account**, admin-only — nothing you need to do yourself), open a client or lead's **Calls** tab and click **Create Meeting** to schedule a real Google Meet call — pick a time, and it invites the client's email automatically and shows you the link to share directly too (handy for WhatsApp). No Google account of your own needed.

Inviting teammates: the scheduler also lets you pick any active colleague to invite internally — they get a bell notification, a card on their own Dashboard with **Accept/Decline** buttons, and a ****Join**

Google Meet** link, all without needing a real Google Calendar invite. Each meeting's page shows every invited teammate's current status next to the client's name. **Import Meet Notes** is for a call that already happened outside that flow — it pulls in the recording link, transcript link, and full transcript text Google Meet already generated, the same way a logged call shows up (needs Recording/Transcripts turned on for that call, and a few minutes after it ends to finish processing). Both work the same way for Leads too. If AI is also enabled, an imported meeting with a transcript gets a **Summarize with AI** button (or the summary appears automatically a little after import) — Claude turns the raw transcript into short "Key points / Decisions / Action items" notes, visible to anyone who opens that client's page. If it fails, a **Retry** link appears in its place.

Meetings held on Zoom, Microsoft Teams, or anywhere else: click **+ Log External Meeting** on the same Calls tab — this works even if no Google account is connected at all, since it's independent of the integration above. Pick the platform, when it happened, an optional duration, and paste in your notes or a transcript. If AI is enabled, whatever you paste gets summarized the same way an imported Google Meet transcript does.

Monthly wins note (AI, optional): on the 1st of each month, if AI is enabled and one of your clients had tasks completed, tickets resolved, a payment, or (for clients on Drishti) posts published/audits completed in the month before, Claude drafts a short "here's what we delivered" note and adds it to that client's **Notes** tab (marked "AI-drafted monthly update"). It's staff-only — the client never sees it automatically. Review it, personalize it, and send it yourself via email or WhatsApp if it reads right.

Daily project update drafts (AI, optional): if AI is enabled, every evening at 6:30 PM Claude drafts a short client-facing update for each of your active projects that had a task completed that day (skipped on Sundays, and skipped entirely if nothing was completed). Unlike the monthly wins note, this one has a built-in send step: open the project page and you'll see a **Pending Client Update** panel above Notes & Client Updates. Edit the wording if you like, then click **Approve & Send** — this posts it to the client's portal under "Updates from Our Team" *and* emails it to the client's billing contact, in one step. Click **Discard** instead if a day's draft isn't worth sharing. Nothing reaches the client until you approve it.

4a. Contract & Renewal Dashboard

Sidebar → **Contract & Renewals** (shared with Manager and Accounts) — active recurring contracts ending in the next **30, 60, or 90 days**, each with a **renewal status** you set: Not Started → Discussion → Proposal

Sent → Negotiation → Renewed/Lost. Use it to see which of your clients' renewals actually have a conversation happening and which are about to lapse with nobody talking to the client yet.

5. Incentives

Sidebar → **Incentives** shows your monthly sales incentive, calculated live from the same "won this month" value shown on the Sales Dashboard (so the two pages never disagree):

- **Individual incentive** — a tiered rate on your before-tax sales this month: 6% up to ₹50,000, 10% up to ₹1,00,000, 12.5% up to ₹1,50,000, 15% up to ₹2,50,000, 20% above that. Rates are marginal, like income tax — each slab's rate only applies to the portion of sales *within* that band, so there's never a reason to hold a deal back to avoid crossing a boundary.
- **Team bonus** — a fixed pool (set by Admin/Manager) split evenly across every active Sales rep, paid only in months the company-wide monthly target (set on the Sales Dashboard) is met.
- **Slab progress bar** shows where this month's sales sit across the five bands, plus how much more you need to reach the next rate.
- **Finalized history** — once a month closes, the 1st-of-the-month job locks that month's numbers into a permanent record (so editing an old deal later never changes a past month's incentive). Anything showing for the current, still-open month is a live estimate, not yet finalized.

6. Content pieces (when you're a project's Project Manager)

If you are set as the **Project Manager** of a project, you can track content pieces for that project — useful when NEDS is managing social media or other content for a client alongside a partner agency.

Adding a content piece: open the project → **Content Pieces** card →

Add piece. Choose the workflow type:

- **Agency-led** — the partner agency creates the content and delivers it to NEDS for publishing. Starts in *Pending from agency*.
- **NEDS-led** — NEDS writes the copy/brief first, sends it to the partner for visuals, then publishes. Starts in *Copy drafting*. **If the copy was written in SMDost and marked "Send to agency" there, the piece is created automatically** in *Sent to partner* status — no need to add it manually. Fill in the platform (Instagram, Facebook, etc.), title, publish date, and any notes. Assign a partner if one is involved.

Advancing status: open the content piece → click the **Move to...** button to move it to the next step. When a piece is marked *Published*, the timestamp is recorded automatically.

Google Drive: you can store a Drive link on each piece (for the specific

file) and on the project itself (for the shared folder). These appear as clickable links so you can jump straight to the asset.

Upload links (generating one requires manager access — ask your manager).

Once a link is generated you can copy it and send it to the partner; they upload files without needing a CRM login.

Bell notifications

The 🔔 bell icon at the top of the screen shows real-time alerts for your key events. You'll be notified when:

Event	Who gets it
🟢 New lead created	The assigned sales person — or all sales staff if the lead has no owner yet (rare now that leads auto-assign)
🔥 Hot lead (AI score ≥ 70)	The lead's owner, as soon as the score comes back — no need to wait for the morning digest
🌟 Nurture follow-up drafted	The lead's owner, when a New lead has gone 1/3/7 days with no note or call from you
📄 New quotation created	The deal's assigned sales person
🏆 Deal marked Won	The deal's assigned sales person + all managers and admins
📄 New invoice created	The client's assigned sales person (recurring auto-invoices are excluded to avoid noise)
📊 Monthly wins note drafted	The client's assigned sales person, on the 1st of each month for clients with something to report the month before
📅 Project daily update ready to review	The project owner, at 6:30 PM on days a task was completed on one of their projects

Click any notification to jump straight to the record. Click **Dismiss** to clear it.

Email alerts

The CRM sends you two types of automated emails to help you stay on top of things:

Morning digest (9 AM daily) — a summary of your day: overdue tasks, tasks due today, call follow-ups due, lead follow-ups, deal follow-ups, and open tickets.

No email means your slate is clean. If AI is enabled, it opens with a short AI-written line on what to prioritise — the same line also shows as a banner on your dashboard for the rest of the day.

Stagnation alert (10 AM daily) — if any of your leads haven't had any activity (note, call, or edit) for **7 days**, or any of your deals for **10 days**, you'll get a reminder. Even adding a brief note resets the clock.

Tips

- Use the **search bar** to jump straight to any lead, client or deal.
- Keep **notes** and **call outcomes** up to date — they drive your follow-up list, your performance report, and the stagnation clock.
