

Getting Started (everyone)

Welcome to the NEDS CRM. This covers the basics every team member needs.

1. Logging in

1. Go to **https://crm.talktonitesh.com**.
2. Enter the **email** and **temporary password** your administrator gave you.
3. Click **Log in**.

If you ever forget your password, an admin can reset it for you from the Users screen.

2. First login — set up Two-Factor Authentication (admins & managers)

For security, **admins and managers must set up an authenticator app** the first time they log in. (Sales, support and accounts users skip this.)

1. After logging in you'll land on the **2FA setup** screen.
2. Open an authenticator app on your phone — **Google Authenticator**, **Authy**, or **1Password** all work.

1. **Scan the QR code** (or type the key shown).
2. Enter the **6-digit code** the app shows and click **Confirm**.
3. **Save your recovery codes** somewhere safe — each can be used once if you lose your phone.

From then on, you'll enter a 6-digit code each time you log in.

3. Change your password

Click your **name** (top-right) → **Profile** → **Update Password**. Set a password only you know.

4. Finding your way around

- **Left sidebar** — your modules. What you see depends on your role.
- **Search bar** (top) — find any client, lead, deal, invoice, ticket or project

by name or number.

-  **Log a call** (top) — quickly record a phone call with a client or lead.
-  **Bell icon** (top) — your notification centre. Alerts vary by role but include: tasks assigned to you, call follow-up reminders, new leads, hot leads (AI score ≥ 70), deal won, payment recorded, and upcoming recurring invoice due dates. Click a notification to go straight to the record; click **Dismiss** to clear it.

- **Your name** (top-right) — Profile and Log out.

4a. Overdue tasks alert

If you have any tasks past their due date, a **red banner** appears at the top of your dashboard when you log in. Click **View tasks** → to see them and clear the backlog.

5. Attendance — check in and out

On the **Dashboard**, use the attendance widget:

- **Check in** when you start your day.
- **Check out** when you finish.

Also do your biometric fingerprint punch as usual — do both, not one or the other. The two work together automatically: your CRM check-in/out marks you present immediately, and your biometric punch fills in or corrects the exact time within a few minutes once it syncs. Whichever is the **earliest** check-in and **latest** check-out (from either source) is what's kept — so there's no conflict and nothing to undo if both are recorded.

Your manager can see attendance, and it feeds the performance reports.

5a. Requesting leave

Open **Leave Requests** in the sidebar to apply: pick a start date, end date, and a short reason, then submit. Any admin or manager can approve or reject it — you'll get a bell notification either way. Once approved, your attendance for those days is automatically marked **Leave** (Sundays are skipped since they're not office days). You can cancel a request yourself as long as it's still pending.

6. Daily report — end of day

At the end of the day, open **Daily Reports** and submit a short "what I did today". Some numbers (tasks completed, calls made) are filled in automatically; add a sentence or two on your day and submit. You'll get a reminder at 6 PM.

My Tasks on this page is grouped by project, with the project needing the soonest attention shown first. Within each project, tasks someone assigned you directly appear up top;  **routine maintenance** tasks — things like "Google Search Console review" or "SSL certificate expiry check" that the CRM creates automatically on a schedule for every active project (no one assigned these to you personally) — are collapsed under a "click to view" line so they don't bury the tasks that actually need your judgement. Click that line whenever you want to see or update them.

7. Morning digest email

Every morning at **9 AM** you'll receive a personalised email summarising your

day — overdue tasks, tasks due today, call follow-ups, and any open tickets assigned to you. No email means you have a clean plate for the day.

If anything is due, the email opens with a short **AI-written summary** of what to prioritize — the same text also appears as a banner on your dashboard for the rest of the day. It's generated only from your own tasks/follow-ups, never invents anything, and disappears automatically the next day.

8. Logging out

Click your **name** (top-right) → **Log Out**. Always log out on shared devices.

Next: read the guide for your role — [Sales](#), [Support](#), [Accounts](#), [Manager](#), [Admin](#), or [Intern](#).
