

Getting Started — Recording Script

Audience: every new hire, regardless of role. This is the first video they watch, before their role-specific one.

Target length: ~8 minutes

Before you record: log in as any real test user. Have a task assigned to that user that's overdue (so the red banner shows), make sure the bell icon has at least one unread notification to point at, and have a pending leave request ready if you can (any status is fine).

Scene 1 — Intro (0:00–0:20)

ON SCREEN: The login page, <https://crm.niranjanenterprises.co.in>.

SAY: "Hey, welcome to NEDS! This video walks you through the basics of our CRM — everyone watches this one first, then there's a shorter video specific to your role. Let's get started."

Scene 2 — Logging in (0:20–0:50)

ON SCREEN: Type in the email + temporary password you were given, click Log in.

SAY: "You'll get an email and a temporary password from your admin. Type those in here and log in. If you ever forget your password, just ask an admin — they can reset it for you from the Users screen."

Scene 3 — Two-factor setup, admins/managers only (0:50–1:40)

ON SCREEN: If recording as an admin/manager test account, show the 2FA QR code screen. Otherwise, just describe it.

SAY: "If you're an admin or manager, the first time you log in you'll be asked to set up two-factor authentication — scan this QR code with Google Authenticator, Authy, or 1Password, type in the 6-digit code, and save your recovery codes somewhere safe. Sales, support, and accounts don't need this step."

Scene 4 — Change your password (1:40–2:10)

ON SCREEN: Click your name (top-right) → Profile → Update Password.

SAY: "First thing, change your password to something only you know — click your name top-right, Profile, Update Password. One more thing on this same page, only if you own or lead client projects: paste your Google Calendar scheduling link into the 'Google Meet scheduling link' field."

That's what turns on the 'Schedule a Meeting' button clients see on their portal — without it set, the button just doesn't appear for your clients."

Scene 5 — Finding your way around (2:10–3:25)

ON SCREEN: Point to the sidebar, then the search bar, then the "Log a call" button, then the bell icon.

SAY: "Quick tour. The left sidebar is your modules — what you see here depends on your role, so don't worry if yours looks different from a coworker's. Up top, the search bar finds any client, lead, deal, invoice, ticket, or project by name or number — fastest way to jump anywhere. Next to it, 'Log a call' quickly records a phone call you just had. And this bell icon is your notification centre — it covers things like tasks assigned to you, call reminders, new leads, a deal being won, a payment recorded, or an invoice coming due. Click any notification to jump straight to it, or Dismiss to clear it."

Scene 6 — Overdue tasks banner (3:25–3:45)

ON SCREEN: The red banner at the top of the dashboard.

SAY: "If you ever have tasks that are overdue, you'll see this red banner right when you log in — click 'View tasks' to go straight to your backlog and clear it."

Scene 7 — My Day (3:45–4:25)

ON SCREEN: Sidebar → My Day.

SAY: "One page worth building a habit around: My Day. It's a single worklist pulling together everything due or overdue that's actually yours — tasks, lead and deal follow-ups, call follow-ups, and for support, tickets about to breach SLA. Instead of checking four or five separate screens each morning, check this one first. Every item links straight to the record, and once you're caught up, the list just empties out."

Scene 8 — Attendance: check in/out AND the biometric machine (4:25–5:35)

ON SCREEN: The attendance widget on the dashboard, Check In / Check Out buttons.

SAY: "Every day, use this attendance widget — Check In when you start, Check Out when you finish. Now here's the important part: **also do your fingerprint punch on the biometric machine as usual — do both, not just one.** They work together automatically. Your CRM check-in marks you present right away, and the biometric punch fills in or corrects the exact time within a few minutes once it syncs. The system always keeps whichever

is earliest for check-in and latest for check-out, from either source — so there's no conflict, and doing both is exactly what you should do every day."

Scene 9 — Requesting leave (5:35–6:15)

ON SCREEN: Sidebar → Leave Requests → fill in leave type, dates, reason → Submit.

SAY: "Need a day off? Leave Requests in the sidebar. Pick a leave type — Full Day or Half Day — a start and end date, and a short reason. A Half Day request has to be a single date, start and end the same. Any admin or manager can approve or reject it, and you'll get a bell notification either way. Once approved, your attendance for those days is marked automatically — Leave for a full day, Half Day for a half day — Sundays are skipped since they're not office days anyway. You can cancel your own request as long as it's still pending."

Scene 10 — Daily report (6:15–7:00)

ON SCREEN: Open Daily Reports, show the form, point at the "🔔 routine maintenance" collapsed line under My Tasks if visible.

SAY: "At the end of your day, open Daily Reports and write a couple of sentences on what you worked on. Some numbers — tasks completed, calls made — are already filled in for you. You'll get a reminder email at 6 PM if you forget. Below that, My Tasks groups your tasks by project, with whichever project needs attention soonest shown first — and anything the CRM created automatically on a schedule, like a routine maintenance check, is collapsed under a 'click to view' line so it doesn't bury the tasks someone actually assigned you personally."

Scene 11 — Morning digest + wrap-up (7:00–7:45)

ON SCREEN: (Optional — show an example digest email if you have one handy, otherwise just talk over the dashboard.)

SAY: "Every morning at 9 AM you'll get an email summarising your day — overdue tasks, tasks due today, follow-ups, open tickets. If there's anything on your plate, it opens with a short AI-written line on what to prioritise — that same line also shows as a banner on your dashboard for the rest of the day. No email means your plate's clean. And when you're done for the day, click your name, top-right, Log Out — especially on any shared device. That's the basics — next, watch the video for your specific role."
