

Getting Started (everyone)

Welcome to the NEDS CRM. This covers the basics every team member needs.

1. Logging in

When your account is first created, you'll get a **"Set my password"** email — click the link and choose your own password before you log in for the first time (the link expires after an hour; if it's expired, use ****Forgot your password?**** on the login page to get a fresh one).

1. Go to **<https://crm.niranjanenterprises.co.in>**.
2. Enter your **email** and the **password** you set.
3. Click **Log in**.

If you ever forget your password afterwards, click **Forgot your password?** on the login page, or ask an admin to reset it for you from the Users screen.

2. First login — set up Two-Factor Authentication (admins & managers)

For security, **admins and managers must set up an authenticator app** the first time they log in. (Sales, support and accounts users skip this.)

1. After logging in you'll land on the **2FA setup** screen.
2. Open an authenticator app on your phone — **Google Authenticator**, **Authy**, or **1Password** all work.

1. **Scan the QR code** (or type the key shown).
2. Enter the **6-digit code** the app shows and click **Confirm**.
3. **Save your recovery codes** somewhere safe — each can be used once if you lose your phone.

From then on, you'll enter a 6-digit code each time you log in.

3. Change your password

Click your **name** (top-right) → **Profile** → **Update Password**. Set a password only you know.

If you own or lead any client projects: on the same **Profile** page, paste your Google Calendar appointment-scheduling link into the ****Google Meet scheduling link field and save. This is what powers the Schedule a Meeting**** button clients see on their portal project page — without it set, that button simply won't appear for your clients.

****Meet notes and Create Meeting** (optional, separate from the scheduling link above): ****** if enabled, an admin connects NEDS's Google account once (Profile → Google Account — admin-only screen, not something everyone needs or sees).

Once that's done, **everyone** gets a **Create Meeting** button on any client or lead's Calls tab — it schedules a real Google Meet call through

that same connection, emails the client the invite automatically, and shows you the link to share directly too. There's also **Import Meet Notes**, for a call that already happened outside that flow — it pulls in the recording/transcript Google Meet already generated. If AI is also enabled, Claude can summarize an imported transcript into short "Key points / Decisions / Action items" notes — either automatically after import or via a ****Summarize with AI**** button.

4. Finding your way around

- **Left sidebar** — your modules. What you see depends on your role.
- **Search bar** (top) — find any client, lead, deal, invoice, ticket or project by name or number.
-  **Log a call** (top) — quickly record a phone call with a client or lead.
-  **Bell icon** (top) — your notification centre. Alerts vary by role but include: tasks assigned to you, call follow-up reminders, new leads, hot leads (AI score ≥ 70), deal won, payment recorded, and upcoming recurring invoice due dates. Click a notification to go straight to the record; click **Dismiss** to clear it. If the deal or invoice a notification points to has since been deleted, it shows as plain text with **"(deal deleted)"** or **"(invoice deleted)"** instead of a link — the alert was accurate when it fired, the record just no longer exists.
- **Your name** (top-right) — Profile and Log out.

4a. Overdue tasks alert

If you have any tasks past their due date, a **red banner** appears at the top of your dashboard when you log in. Click **View tasks** → to see them and clear the backlog.

4b. My Day

Sidebar → **My Day** is a single worklist pulling together everything due or overdue that's yours: tasks, lead/deal follow-ups, call follow-ups, and (for Support) SLA-breached tickets. Instead of checking five separate screens each morning, check this one page first — each item links straight to the record so you can act on it, and the list disappears once you're caught up.

4c. Notice Board

If admin or a manager has posted a company-wide notice — office closures, holiday reminders, policy changes — it shows as a  banner at the top of your **Dashboard**, above the overdue-tasks alert. Click the **x** to dismiss it; dismissing is remembered only on that browser/device, so it may reappear if you check the CRM from a different computer or phone. A notice

disappears on its own once its end date passes.

4d. Reminders (Team Nudges)

Below the Notice Board, a **Reminders** card on your Dashboard shows any nudges admin/manager has targeted at your role (or everyone) — things like "log every active client as a Deal" or "route issues through Tickets."

- Click **Done** once you've actually done it.
- Click **Snooze 3d** to hide it from your view for 3 days — snoozing only

hides it from *you*; admin/manager still see the real status on their side, so snoozing isn't a way to make something go away for good.

- Some reminders clear themselves automatically the moment you do the real thing they're asking for (e.g. logging a Ticket) — no click needed for those.

4e. Follow-up Reminders

Also on your **Dashboard**, below Reminders (Team Nudges), a **Follow-up Reminder** widget lets you set a personal reminder against any client — a call to make, a report to share, a quotation to send, a deal to chase.

Click **+ Add follow-up reminder**, pick the client (optional — you can also leave it blank for a general reminder), set the date/time and a one-line next action, and save. You'll get a bell notification once it's due, and it stays listed on your Dashboard (soonest first) until you click **Done**.

This is separate from a Call Log's own follow-up reminder (see the Sales/Support guides) — that one only exists once you've actually logged a call; this one is for setting a reminder ahead of time, for anything.

Sending a quotation creates one of these automatically — a 3-day reminder to follow up, no need to set it yourself. See Sales guide → Quotations.

4f. Meeting Invitations

If a colleague schedules a **Google Meet** call (via **Create Meeting** on a client or lead's Calls tab — see the Sales/Support guides) and adds you as an internal attendee, it shows up as a card on your own **Dashboard** with the meeting title, client, time, and organiser, plus **Accept/Decline** buttons and a direct **Join Google Meet** link. This is separate from the real Google Calendar invite the client receives — it's just a CRM-side heads-up and RSVP so you don't have to check email to see it, and it only shows upcoming meetings, soonest first.

On top of that, the same "what should I do next" popup (see Section 5 above) will pop up a **Join now** reminder starting about 10 minutes before any meeting you organized or accepted, so you don't have to remember to check the Dashboard — it opens the Meet call in a new tab.

Declining a meeting invitation stops this reminder too.

4g. Resources

Sidebar → **Resources** has two tabs:

- **Files** — a shared internal file library (plugin builds, certificates, templates...). Only Admin/Manager can upload, edit, or delete a file (see the Admin guide for how); everyone else sees a read-only list.
 - **Links** — a company-wide list of official links (hosting panel, domain registrar, etc.), grouped and filterable by department/purpose.
- Both can be restricted to specific roles when added — a Support-only file or an Accounts-only link simply won't appear for anyone outside that role. Leave "Visible to" blank to show it to everyone. Per-client links still live on each client's own page, unaffected by this page.
- Every **client's own page** also has a **Links** tab — that client's website, Google Business Profile, socials, Drive folder, payment links, or anything else useful for serving them. Anyone who can open the client's page can see these; who can add/edit them follows the same rule as everything else on that client's page.

5. Attendance — check in and out

On the **Dashboard**, use the attendance widget:

- **Check in** when you start your day.
- **Check out** when you finish.

If you haven't checked in yet, a small card also pops up in the bottom-right corner of every page reminding you — click **Check in now** right there (no need to go to the Dashboard first), or **Snooze** it — 30 min, 2 hours, or Remind me tomorrow — if you're not ready yet. This is the first step of a wider "what should I do next" guide the CRM walks you through — once you're checked in, it'll prompt you for anything else that needs your attention (e.g. Sales reps get prompted to call a fresh lead the moment one lands in their queue), and at the end of the day (past 6pm office-hours close), the same popup reminds you to submit your daily report and then **Check out now** — the true last step, right from the popup, no need to go to the Dashboard.

An Admin or Manager can pause this popup for **everyone** company-wide (for example, during an all-hands or a demo) from ****Notification Settings**** in the sidebar, and resume it the same way — so if the popup isn't appearing at all for anyone, check there before assuming something's broken. This is separate from your own personal **Snooze** on one prompt.

Also do your biometric fingerprint punch as usual — do both, not one or the other. The two work together automatically: your CRM check-in/out marks

you present immediately, and your biometric punch fills in or corrects the exact time within a few minutes once it syncs. Whichever is the **earliest** check-in and **latest** check-out (from either source) is what's kept — so there's no conflict and nothing to undo if both are recorded.

Your manager can see attendance, and it feeds the performance reports.

5a. Requesting leave

Open **Leave Requests** in the sidebar to apply: pick a **leave type** (Full Day or Half Day), a start date, end date, and a short reason, then submit. A Half Day request must be for a single date — start and end date must match. Any admin or manager can approve or reject it — you'll get a bell notification either way, and once decided, your own Leave Requests list shows who reviewed it. Once approved, your attendance for those days is automatically marked **Leave** (or **Half Day** for a half-day request) — Sundays are skipped since they're not office days. You can cancel a request yourself as long as it's still pending.

If you're Sales or Telecaller and currently own/handle any open leads, the admin/manager approving your request will pick a covering teammate before they can approve — that colleague gets temporary access to your leads' WhatsApp chats on wadesk for the leave period, which reverts on its own once you're back (see the Sales/Telecaller guide for detail). Nothing to do on your end beyond submitting the request as normal.

5b. Working from home

Open **Work From Home** in the sidebar to request a remote day: pick a **duration** (Full Day or Half Day), a start date, end date, and a short reason, then submit — same form and approval flow as Leave Requests, from any admin or manager. The one difference: WFH doesn't mark you as on leave. You're still working, so once approved, check in and out from **Attendance** exactly as on any other day — approval just lets your manager know where you're working from, and shows a **Remote** badge on that day's attendance row. You can cancel a request yourself as long as it's still pending.

6. Daily report — end of day

At the end of the day, open **Daily Reports** and submit a short "what I did today". Some numbers (tasks completed, calls made) are filled in automatically; add a sentence or two on your day and submit. You'll get an email reminder at 6 PM, and the same "what should I do next" popup from Section 5 will also prompt you directly — it takes priority over anything else still showing once it's past 6pm, so you won't miss it under an older reminder.

This page is also your daily work dashboard, so you don't have to remember what's still open from before:

- 🕒 **Carried forward from before today** — a highlighted panel at the top listing any of your open tasks that already existed before today, so yesterday's unfinished work isn't buried further down the page.

- ✅ **Completed today** — every task you finished today, with how long it took shown next to it. That time is worked out automatically from when you moved the task to **In Progress** to when you marked it **Done** — there's no separate start/stop button. A task moved straight from To Do to Done without passing through In Progress shows "—" instead of a made-up number.

- ✨ **Draft with AI** (next to the summary box, when AI features are enabled) — drafts your "what I did today" paragraph from today's completed tasks and calls. Review and edit it like any AI draft before submitting; it's never sent on your behalf.

- 📄 **Copy to send** — once you've submitted today's report (or on any past day in the history table below), copies a plain-text version formatted for pasting straight into WhatsApp or email.

- **Still pending** — everything still open for you right now, across every module you touch: tasks, tickets, leads, deals, quotations awaiting a client decision, and unpaid/overdue invoices. Not just tasks — the full picture of what needs following up.

- **Activity timeline** — a chronological feed of everything you actually did today (deals moved, quotations sent, invoices raised, payments recorded, tickets worked, calls made, and more), each entry linking straight to the record. Use the date picker to look back at a previous day instead.

My Tasks on this page is grouped by project, with the project needing the soonest attention shown first. Within each project, tasks someone assigned you directly appear up top; 📅 **routine maintenance** tasks — things like "Google Search Console review" or "SSL certificate expiry check" that the CRM creates automatically on a schedule for every active project (no one assigned these to you personally) — are collapsed under a "click to view" line so they don't bury the tasks that actually need your judgement. Click that line whenever you want to see or update them.

6a. Best Employee of the Quarter

Sidebar → **Best Employee** shows your own recognition history. Each financial-year quarter, AI reviews performance numbers already tracked elsewhere in the CRM (tasks, calls, attendance, and more) and suggests a top performer per department, plus one company-wide winner. If Admin/Manager approve a suggestion naming you, you'll get a bell notification and a downloadable certificate — recognition only, not tied to any payout.

7. Morning digest email

Every morning at **9 AM** you'll receive a personalised email summarising your day — overdue tasks, tasks due today, call follow-ups, and any open tickets assigned to you. No email means you have a clean plate for the day.

If anything is due, the email opens with a short **AI-written summary** of what to prioritize — the same text also appears as a banner on your dashboard for the rest of the day. It's generated only from your own tasks/follow-ups, never invents anything, and disappears automatically the next day.

8. Logging out

Click your **name** (top-right) → **Log Out**. Always log out on shared devices.

9. Glossary — what these words actually mean

The CRM uses several words that sound interchangeable but aren't. Picking the wrong one doesn't just look odd — it makes that record invisible to the reports and reminders that key off it. When in doubt, use this list rather than guessing.

- **Lead vs Client** — a **Lead** is someone who hasn't paid yet: an inquiry you're still working. A **Client** (called "Customer" internally) is a real company with at least one won Deal. A Lead doesn't become a Client by editing its status — it becomes one when you actually convert it.

- **Lead status: New → Contacted → Qualified → Converted (or Lost)** — **Qualified** means you've confirmed a real budget and a real need, not just that you spoke to them. **Converted** means this lead has actually become a Deal and a Client record — don't set it by hand as a label; use the **Convert** action so both records are actually created.

- **Deal stages: New → Contacted → Proposal → Negotiation → Won/Lost** — a Deal is one specific piece of work being sold, priced in ₹. **Negotiation** specifically means a quotation has been sent and you're discussing terms — don't drag a card there just because you talked to the client again; send the quotation first.

- **Deal vs Quotation** — the Deal is the pipeline card (stage, value, service, owner). The **Quotation** is the actual priced document you send the client, generated from the Deal and downloadable as a PDF. A Deal in Negotiation or later should always have a real Quotation attached — if it doesn't, something's out of sync.

- **Service** — the category tag on a Lead, Deal, Project, or Quotation line (SEO, GMB, Website Design & Development, Social Media Management, Performance Marketing, Software Development, AI Automation, AMC Service, plus anything an admin has added since). Pick whichever is the ****closest**

real match**. If one deal genuinely spans two services, put the main one here and name the second in the title — don't invent or reach for a vague catch-all category, since reports are sliced by this field.

- **Project vs Task ("Emptask")** — a **Project** is created once a Deal is Won; it's where a client's ongoing delivery work lives. A **Task** is one specific unit of work inside a Project (or standalone) — what actually gets assigned to a person, tracked, and marked done. Deals and Leads themselves are never "worked" directly; the Tasks under a Project are.

- **Recurring Services vs Projects (client's Services tab)** — a monthly or yearly retainer (SEO, GMB, Social Media, Performance Marketing, AMC Service) belongs under **Recurring Services**, set up as a Recurring Invoice template (Invoices → Recurring Invoices) so it bills itself automatically every cycle. **Projects** are for one-time or milestone-billed work with a real end point (Website Design & Development, Software Development, AI Automation). A retainer can still have its own Project too if you want somewhere to track its ongoing task list — that's fine — but the actual invoicing for it should always go through a Recurring Invoice template, not a fresh invoice logged by hand against the Project every month. If a client's ongoing service only shows under Projects with no matching row under Recurring Services, that's usually a sign a template still needs to be set up for it. One exception: a **reseller-billed** client (see Manager guide → Reseller billing) genuinely has an active template — it just won't show on that client's own page at all unless the template is linked to the client's own Project (Invoices → Recurring Invoices → Project field). Don't assume "nothing under Recurring Services" always means "never set up" for this kind of client — check whether they're reseller-billed first.

Next: read the guide for your role — [Sales](#), [Support](#), [Accounts](#), [Manager](#), [Admin](#), or [Intern](#).
