

Support guide

You handle **tickets** (client issues) and **projects & tasks** (delivery work).

Your dashboard

- **Open tickets** — how many are active.
- **SLA at risk** — tickets due soon or already overdue.
- **Total / Pending / Overdue tasks** — your own Employee Task numbers, so you don't have to open Emptask separately to see where you stand.
- **Open tickets by priority** — urgent / high / normal / low.
- **Your Productivity This Month** — your rank among other Support staff this month, an overall score, and your biggest opportunity area. Private to you — nobody else sees your rank, and you don't see anyone else's. If AI is enabled, click **Get tips to improve** for a specific suggestion based on your own numbers — if you have a monthly target set (below), the tip is built around exactly how much you need to close the gap, not just a general nudge.
- **Your target this month** — a progress bar against your monthly ****tickets resolved**** target, if Admin/Manager has set one for you (Team Targets page). "No target set" is normal if they haven't.

Resources

Sidebar → Resources has two tabs — **Files** and **Links**. You can view whatever your role can see on both; adding, editing, or removing entries is Admin/Manager only. **Files** is the place to look for things like the latest plugin build or theme update package instead of asking around on chat — it's tagged by category (Plugins & Software, Certificates & Compliance, Templates & Documents, Policies & SOPs, Other) so you can filter straight to what you need. Some files are restricted to specific roles ("Visible to") — if you can't find something you expect, it may not be tagged for Support yet; ask Admin/Manager to add it or open it up. Every **client's own page** also has its own **Links** tab, separate from this page — that client's website, Google Business Profile, socials, Drive folder, and similar. Anyone who can open the client's page can see these.

1. Tickets

Tickets come from clients (via their portal) or are raised by staff.

"Respond to this ticket" popup: the moment an Open ticket lands in your queue with no staff reply yet, a small card appears in the bottom-right

corner of every page, oldest unreplied ticket first. Click **Open ticket** to jump straight to it, or **Snooze** if you can't get to it right now — pick 30 min, 2 hours, or tomorrow, and it'll come back then, moving on to your next oldest ticket once you've replied. If you haven't checked in for attendance yet today, that comes first (see the Getting Started guide's Attendance section) — once you're checked in, this is what the same popup guides you through.

Raising a ticket yourself: after filling in the client, subject, and description, click ✨ **Suggest priority & assignee** to have Claude propose a priority and — if it can match the description to one of the client's active services — who's likely the right person, based on that service's project lead. It only fills the fields above; nothing submits until you click **Create Ticket**, so double-check before sending.

Open a ticket to see the conversation. Each ticket has a **priority** and an **SLA due time** (when it should be resolved by) — urgent ones are due soonest. If one of your open tickets is due within 4 hours (or already overdue), the same "what to do next" popup will prompt you about it too — ahead of any brand-new unreplied ticket, since a client-facing deadline about to be broken matters more than one that isn't yet time-boxed.

Replying:

- Type in the reply box and send. A normal reply is **emailed to the client**.
- Tick **Internal note** to leave a note only staff can see (not emailed).
- If AI is enabled, **Draft with AI** writes a suggested reply from the conversation — edit it before sending. **Summarize thread** gives you a quick recap of a long ticket.

Managing: use the panel to change **status**, **priority**, or **assignee**, attach files, and **Mark resolved** when done (the client is notified).

Client attachments: clients can attach files (documents, PDFs, screenshots, etc.) when they raise a ticket from the portal. These show up in the same **Attachments** section as staff uploads, labelled "**(client)**" so you know it came from them — no need to ask the client to email or WhatsApp a file separately.

Filtering: use the filter bar to narrow by status, priority, or assignee.

Tick **SLA breached** (shown in red) to instantly see only the open tickets that have passed their SLA deadline — useful for prioritising your queue at the start of the day.

SLA breaches: when a ticket passes its SLA deadline, managers receive a one-time escalation email. The email shows how long overdue the ticket is (e.g. "1d 14h overdue"), the client, channel, priority, assignee, and a direct link to the ticket. No repeat emails — resolving the ticket is the way to clear it from the breach list.

Escalating a ticket to managers: for anything that needs a manager's eyes

right now — not just an SLA breach — click ▲ **Escalate to managers** in the Manage panel on the ticket's page. Every Admin/Manager gets a bell notification and the ticket shows an orange "Escalated" badge (on the ticket itself and in the Tickets list, where you can also filter to **Escalated** only). This is separate from the automatic SLA-breach email above — you control it, and it stays escalated until a manager clears it, which only they can do (also visible as a count on their **Action Center** page — see the manager guide).

2. Calls

Use 📞 **Log a call** (top bar) or **Calling** to record calls you make to clients about their tickets or projects. Support doesn't have access to **Leads**, so the call form only lets you log against a **Client** — there's no Lead option to pick from. On the Notes field, click **Dictate** and speak instead of typing (Chrome/Edge only). If AI features are enabled, you can also **Record voice note (Hindi/Marathi/English)** — speak the recap in whichever language is fastest and the CRM transcribes and translates it to English automatically, shown as a separate block under your typed notes on the **Calling** page within about a minute. Logged one by mistake (wrong client, duplicate entry)? A **Delete** link appears next to it — you can remove your own, or a manager/admin can remove anyone's.

Create Meeting and Meet notes (optional): once an admin has connected NEDS's Google account (**Profile** → **Google Account**, admin-only), click **Create Meeting** on a client's Calls tab to schedule a real Google Meet call — it invites the client's email automatically and shows you the link to share directly too. You can also invite any active colleague as an internal attendee from the same scheduler — they get a bell notification and an Accept/Decline card on their own Dashboard. For a call that already happened outside that flow, **Import Meet Notes** pulls in the recording link, transcript link, and full transcript text Google Meet already generated for it. If AI is also enabled, it gets a short **AI summary** (Key points / Decisions / Action items) too, either automatically or via a **Summarize with AI** button.

Meetings held on Zoom, Microsoft Teams, or elsewhere: click **+ Log External Meeting** on the same Calls tab — works even without a Google account connected. Pick the platform, when it happened, and paste in your notes or a transcript; it gets the same AI summary treatment if enabled.

3. Projects (Project Updates)

A **Project** is created from a won deal. Open **Project Updates** to see your projects, each with its client, service and tasks.

Posting updates to the client: each project has a **Notes & Client Updates**

section at the bottom. If you are **assigned to a project**, you will see the note form. Type a note — the **Visible to client** checkbox is **checked** by default (shown in indigo when on). Keep it checked so the update appears in the client's portal under "Updates from Our Team". Untick it only for internal notes that staff shouldn't share (e.g. hand-off notes). A "Visible to client" badge marks shared notes in the list. If you do not see the note form on a project, you are not assigned to it — ask a manager to add you.

Editing or deleting a note: click **Edit** next to any note you wrote to correct it inline, or **Delete** to remove it. Managers can edit or delete any note; you can only edit/delete your own.

Automated daily draft (if AI is enabled): if a task on the project was marked Done today, Claude may draft a short client update automatically each evening. This shows as a **Pending Client Update** to the project owner (or an admin/manager) for them to review and approve — you don't need to do anything for this unless you are the project's owner.

Client Deliverables checklist: each project has a **Client Deliverables** section for tracking items you're waiting on from the client (logo, brand content, GST details, domain/hosting access, etc.). Only the project owner or an admin/manager can add items or change their status — add a title and optional instructions, and it appears on the client's portal project page where they can upload files directly against it. A status of **Submitted** means the client has uploaded something for you to review; mark it **Received** once you've confirmed it's usable, or leave it as-is to ask for a resubmission. If you're assigned to a project but aren't its owner, you can still see the checklist and any uploaded files, just not add or change items.

Note on client profiles: Support staff cannot add, edit, or delete contacts on a client profile — that is handled by the Sales team. You can view client and contact details but not change them.

You **can** manage a client's **Services** tab, though: assign a responsible employee to a retainer service with no project (the **Team** column on Recurring Services), add **Service Links**, and add/update items on the **Requirements** and **Assets** tabs (including **Replace**-ing a file on Assets, which keeps the earlier version downloadable).

WhatsApp tickets: if a client messages the **Support** WhatsApp number specifically, the CRM automatically creates a ticket with a green

WhatsApp badge on the tickets list. Handle it like any other ticket — the client sees it in their portal too. (There's a separate Marketing number for pre-sale enquiries — messages on that one become Leads instead, handled by Sales/Telecaller, not Support.)

Drishti context link: if the ticket's client is connected to Drishti (nedsdrishti.in), a blue "**Open in Drishti** →" bar appears on the ticket page, just above the description. Click it to jump straight to the relevant Drishti view for that client — the link goes to the audit list for SEO/GMB tickets, the content/optimization view for Social Media/Ads tickets, or the client's general profile for other service types. This saves you from context-switching manually when the support query is about a delivered service.

4. Tasks (Employee Task)

Employee Task is your task list.

- Update a task's **status** (To-do → In progress → Review → Done) as you work.
- Tasks have a **due date**; overdue ones are flagged.
- Attach files to a task when needed.

Completing tasks on time feeds your performance report, so keep statuses current.

Scheduled maintenance tasks

At **8 AM every day**, the CRM automatically creates maintenance tasks for each active project and assigns them to you with an ****in-app bell notification** — if you're that project's Support-role team member.** (If a project has no Support person on its team, these fall to its lead assignee instead, then its owner — but the normal case is you.) You do not need to remember these — just watch for the bell. If you're on a project's team but never seem to get these, ask your manager to check you're actually listed as that project's Support assignee, not just its Lead/Member.

Each task is already linked to the correct project and includes a description of what to do. Open it, complete the work, and mark it **Done**.

What fires and when:

Task	When
Website backup	1st and 15th of every month
Website malware / security scan	1st and 16th of every month
WordPress / CMS / theme updates	1st of every month
SSL certificate expiry check	1st of every month
Broken link check	1st of every month
GA4 / analytics review	1st of every month
Website health report	1st of every month
AMC contract renewal review	1st of every month
Keyword ranking report (GMB)	1st of every month
On-page SEO review	1st of every month
Off-page SEO review	1st of every month
Monthly SEO report & client review	1st of every month
GMB profile & engagement review	1st of every month
Monthly GMB report	1st of every month
Social media account health check	1st of every month
Monthly social media report	1st of every month
Monthly performance marketing report	1st of every month
Server & database health review	1st of every month
Monthly maintenance report	1st of every month
AI automation workflow review	1st of every month
Monthly AI automation report	1st of every month
Monthly AMC report	1st of every month
Content calendar review	25th of every month
Website uptime & speed check	Every Monday
Technical SEO review	Every Monday
Weekly Google post	Every Monday
Performance marketing campaign review	Every Monday
Client portal contacts audit	1st of Jan, Apr, Jul, Oct

You only receive tasks for the services your projects actually run — a GMB project gets GMB tasks, a Website project gets website tasks, and so on. A new project also gets a one-time onboarding checklist (e.g. "Technical SEO setup") in its first few weeks — these appear once, not on a schedule.

If a task is missing: check that your project status is **Active** and that

a service is set on the project. On-hold or completed projects do not get tasks.

5. Notifications

The bell (🔔) in the top bar is how the CRM reaches you **without email**.

It fires when:

- A task is assigned to you (including the scheduled maintenance tasks above).
- A call follow-up you logged is due.

Click the bell to see all unread notifications with a direct link to the relevant task or ticket. Dismiss them once you've read them.

6. Morning digest email

At **9 AM** (Monday–Saturday) you'll receive a daily email listing your overdue tasks, tasks due today, and open tickets assigned to you — so you know exactly where to focus before you open the CRM. No email is sent on Sundays. If AI is enabled, it opens with a short AI-written line on what to prioritise — the same line also shows as a banner on your dashboard for the rest of the day.

Tips

- Always set the right **priority** on a ticket — it sets the SLA clock.
- Use **internal notes** for hand-offs between team members.
- Keep task statuses current — it feeds the performance report and the morning digest accurately reflects what's still open.
- **Don't let maintenance tasks pile up as overdue** — they count against your on-time completion % in the performance report.
