

Support — Recording Script

Audience: support team (watch [getting-started.md](#) first).

Target length: ~11 minutes

Before you record: have one open ticket and one project you're assigned to ready to click through, plus — if you've connected a Google account — a recent Google Meet call with a client ready to import. Log in as a support user.

Scene 1 — Intro + dashboard (0:00–0:30)

ON SCREEN: Support dashboard.

SAY: "This one's for support. You handle two things day to day: tickets — client issues — and project updates for delivery work. Your dashboard shows open tickets, how many are at risk of breaching SLA, and a breakdown by priority."

Scene 2 — Raising a ticket, with AI triage (0:30–1:30)

ON SCREEN: Tickets → Create → fill in client, subject, description → click 🌟 Suggest priority & assignee → point at the filled-in fields → Create Ticket.

SAY: "If you're raising a ticket yourself rather than it coming in automatically: fill in the client, subject, and description, then click '🌟 Suggest priority & assignee.' Claude proposes a priority, and if it can match your description to one of the client's active services, it'll also suggest who's likely the right person based on that service's project lead. It only fills in those two fields — nothing's submitted until you click Create Ticket, so double-check before you send it."

Scene 3 — Opening and replying to a ticket (1:30–3:00)

ON SCREEN: Open a ticket, type a reply, tick Internal note on a second example, click Draft with AI if enabled.

SAY: "Open a ticket to see the conversation, priority, and SLA due time — urgent ones are due soonest. Type in the reply box and send — that emails the client directly. If you want to leave a note only staff can see, tick 'Internal note' first — that one doesn't get emailed. If AI is turned on, 'Draft with AI' writes you a suggested reply from the conversation — read it, edit it, then send. 'Summarize thread' gives you a quick recap on a long ticket."

Scene 4 — Managing and filtering tickets (3:00–4:00)

ON SCREEN: Change status/priority/assignee on the ticket, then go to the tickets list and tick the SLA breached filter.

SAY: "From the panel you can change status, priority, or reassign, attach files, and mark it resolved once you're done — the client's notified automatically. On the tickets list, use the filter bar to narrow by status or priority, and tick 'SLA breached' to instantly see just the ones that have already blown past their deadline — good way to start your day."

Scene 5 — WhatsApp tickets and Drishti link (4:00–4:40)

ON SCREEN: Point at a WhatsApp-badged ticket, and a Drishti context bar if one's available.

SAY: "If a client messages your WhatsApp number, a ticket gets created automatically — you'll see this green WhatsApp badge. Handle it like any other ticket. And if the client's connected to Drishti, you'll see a blue 'Open in Drishti' bar right above the description — click it to jump straight to the relevant view instead of switching tabs manually."

Scene 6 — Project updates and client-visible notes (4:40–6:15)

ON SCREEN: Open Project Updates → a project → scroll to Notes & Client Updates → type a note, show the "Visible to client" checkbox ticked.

SAY: "Project Updates shows the projects you're on. Scroll down to Notes & Client Updates to post something — 'Visible to client' is ticked by default, meaning it shows up in the client's portal. Leave it ticked for normal updates; untick it only for internal hand-off notes the client shouldn't see. You can edit or delete your own notes anytime — managers can edit or delete anyone's. One thing to flag: support can't add or edit client contacts — that's sales' job — but you can view them fine."

Scene 7 — Google Meet Notes (6:15–6:55)

ON SCREEN: Open a client's Calls tab → click + Import Meet Notes → point at the recording link, transcript link, and an AI-summarized "Key points / Decisions / Action items" section if AI is enabled.

SAY: "If you're on Google Meet calls with clients, connect your Google account once from Profile — then on a client's Calls tab, click '+ Import Meet Notes' to pull in recent Meet calls with them. It saves the recording link, transcript link, and full transcript text right there, same as a logged call — read-only, nothing in your Calendar or Drive changes. It only picks up meetings you personally organized and recorded. If AI's

enabled, an imported meeting with a transcript also gets a short AI summary — key points, decisions, action items."

Scene 8 — Tasks and scheduled maintenance (6:55–8:10)

ON SCREEN: Employee Task list, point at a task with an obvious "maintenance" style title.

SAY: "Employee Task is your task list — move things from To-do through In Progress, Review, to Done as you work. Every morning at 8 AM the CRM auto-creates maintenance tasks for each active project you lead — things like backups, security scans, plugin updates, ranking reports — based on what service that project runs. You'll get a bell notification, they're already linked to the right project, just open, do the work, mark Done. Don't let these pile up overdue — they count against your on-time percentage in the performance report."

Scene 9 — Calls, dictation, and voice notes (8:10–9:10)

ON SCREEN:  Log a call → point out there's no Lead option, just Client → Notes field → Dictate → then, on the Calling page, "Record voice note" and the transcribed/translated block underneath.

SAY: "Use Log a call or the Calling page to record calls about a ticket or project. Support doesn't have access to Leads, so the form only lets you log against a Client — no Lead option to pick. On the Notes field, click Dictate and speak instead of typing, Chrome or Edge only. If AI's enabled, there's also 'Record voice note' on the Calling page — speak your recap in Hindi, Marathi, or English, whichever's fastest, and the CRM transcribes and translates it to English automatically, showing up as its own block under your typed notes within about a minute. Handy if English isn't the easiest language to type a call summary in on the spot."

Scene 10 — Your Productivity and Reminders (9:10–9:55)

ON SCREEN: Point at the "Your Productivity This Month" widget, then the Reminders card.

SAY: "Two more things on your dashboard. 'Your Productivity This Month' shows your rank among other Support staff — private, nobody else sees your rank and you don't see theirs — plus your single biggest opportunity area. If AI's enabled, click 'Get tips to improve' for a specific suggestion based on your own numbers. And the Reminders card shows any nudges targeted at Support, or everyone — like routing every issue through Tickets, even a quick one. Some of these clear themselves automatically once you do the real thing — logging a ticket, for instance — no click needed. Others need

a Done click, or Snooze to hide it from your own view for a few days without making it disappear for your manager."

Scene 11 — Notifications and wrap-up (9:55–11:00)

ON SCREEN: Bell icon, then mention the 9 AM email.

SAY: "The bell fires when a task's assigned to you or a call follow-up comes due — that's how the CRM reaches you without email. And at 9 AM Monday through Saturday you'll get a digest with your overdue tasks, tasks due today, and open tickets, so you know exactly where to start before you even open the CRM. Two habits that matter most: always set the right priority on a ticket — it sets the SLA clock, and the AI suggestion is a good starting point if you're unsure — and keep your task statuses current."
